The time may come when you would gladly pay one hundred dollars for a bottle of Fleming's Colic Cure, if such a price could place the remedy in your hands at the moment. Order a bottle now; it costs but one dollar, and is the best Colic protection that you can have. Read the testimonials regarding it.

The Twelve Signs of the Zodiac

Fleming's Vest-Pocket Veterinary Adviser

Fleming's Veterinary Remedies, though there are several of them, do not afford a suitable treatment for all ailments of horses and cattle. With a view to rendering farmers all the assistance we can in the treatment of their ailing stock, and also with a view to setting forth clearly and adequately the uses and limitations of our own remedies, we have published Fleming's Vest-Pocket Veterinary Adviser. This book contains 192 pages, 69 illustrations, and is durably bound in leatherette. It covers over two hundred veterinary subjects, describing diseases so that you will know how to recognize them by their symptoms, telling you their nature and cause, and what you should do to cure them. The illustration on the back cover of this almanac will afford you a fair idea as

to what the book looks like. We believe it is the best veterinary book ever published to meet the needs of the average farmer, and will gladly mail a copy free of charge to those who believe it would be helpful to them and will write for it. Because Fleming's Vest-Pocket Veterinary Adviser describes nearly all the diseases of horses and cattle so fully and clearly and may be had for the asking, we shall not take space in this almanac to describe even the diseases that our remedies cure. Instead, we shall describe very briefly the remedies themselves, and devote the major portion of available space to the publication of letters that will afford the reader a fair idea as to the kind of work they do.

What They Are For

As this order blank may chance to fall into the hands of some one having need for one or more of Fleming's Veterinary Remedies, but who is not familiar with them and their uses, and has no other printed matter from us to guide him in making the proper selection, we print the following brief information concerning each of the several remedies we supply.

Fleming's Lump Jaw Cure

For the disease of cattle known as Lump Jaw, which is a germ disease resulting from inoculation and manifesting in the form of a tumor. The lump forms upon the upper or lower jaw, most frequently the lower, or back of the angle of the lower jaw below the ear. The formation is hard in the beginning, but as the case develops it softens, breaks, and discharges a thick, stringy pus. Fleming's Lump Jaw Cure is a successful remedy for this disease and saves thousands of animals every year, seldom failing if used before the bone has become badly affected. More than one bottle is seldom needed for a case, and as a general rule less than a bottle is sufficient.

Fleming's Spavin Cure (Liquid)

This remedy is not intended for old and well-established cases of Bone Spavin, Ringbone, or Sidebone, but is all right for such cases when treated at the start of the trouble, and especially where the animal is young. Its principal uses are in treating Splint, Curb, Bog Spavin, Thoroughpin, etc., and it does not produce a scar if properly employed. As a general rule we do not recommend treating blemishes that are not attended by lameness, though there are exceptions, and as space here will not permit our going into details of that kind, we ask those in doubt to write for a copy of Fleming's Vest-Pocket Veterinary Adviser, in which the various blemishes are discussed separately.

Fleming's Spavin and Ringbone Paste

The use of this remedy is confined to the treatment of three kinds of blemishes: Bone Spavin, Ringbone, and Sidebone, the well-developed cases attended by marked lameness. It does not usually take off the enlargement or improve the appearance of the part in any way; in fact, it produces a scar in most instances. The scar, however, is usually small, since the Paste is to be applied upon a spot not larger than a dime, and in the greater number of cases one such treatment is sufficient to cure the lameness, which is all that the remedy is expected to accomplish. This remedy is remarkably successful, and will usually cure even the old cases that have resisted firing and other active methods of treatment. Absolute rest in the stable is necessary, and the usual time required is about six weeks.

Fleming's Fistula and Poll Evil Cure

The name itself tells what this remedy is used for, and it is not difficult to treat these diseases successfully with it. Where the case is discharging it is usually both easier and better to make the applications by means of Fleming's Fistula Syringe, which is constructed especially for the purpose. Regardless of the history of the case or what else has failed, we guarantee satisfaction or your money back; in fact, all our remedies are so guaranteed. This guarantee does not mean, however, that a single bottle must be sufficient to cure. Likely that quantity will be enough, as it usually is, but some few cases prove more obstinate and may require several bottles. Even in these, however, the cure is cheap enough, considering the character of the disease. We think that eighty to eighty-five per cent. of the cases treated are cured with one bottle or less.

Fleming's Knee-Sprung Cure

We do not recommend treating the old and bad cases of Knee-Sprung. They are usually past help. This remedy is intended for the recent cases only, and the most favorable time to use it is when the knees are first observed to be unsteady. The age of the animal should also be taken into consideration, as a cure is less probable where the horse is advanced in years, and especially if he has had hard usage. Most cases are apt to need a couple of bottles.

Fleming's Tonic Heave Remedy

We believe this to be the best remedy for Heaves, and it will cure most cases. Some, of course, appear to be incurable, but even these are usually benefited to an extent worth more than the cost of the remedy. One package is sometimes enough, but most cases require two or three. We do not supply extra packages on trial where more than one is needed. Fleming's Tonic Heave Remedy is an excellent general tonic and blood purifier for horses, and is used for indigestion, lack of condition, and a considerable variety of disorders, as set forth in Fleming's Vest-Pocket Veterinary Adviser.

Fleming's Colic Cure

For both Spasmodic and Flatulent Colic we do not think there could be a better remedy. Every horse owner should keep a bottle constantly on hand. There is no telling how soon it may be needed, and badly needed. Even if never needed, the satisfaction of being prepared for so dangerous a thing as Colic is worth more than the dollar it costs. One to three doses are sufficient for a case, and there are eight doses in the bottle.

Fleming's Sweeny Cure

This remedy is for Sweeny and Shoulder Lameness. It is to be used on one or two small spots the size of a nickel over the affected part. One to three such treatments at intervals of a couple of weeks will usually cure even the bad cases. Rest should be given if the horse is lame, otherwise a little light work during treatment will not harm.

Fleming's Veterinary Healing Oil

This is another remedy that all should keep on hand. Neglect of small wounds makes serious cases of them, and they may reach a stage where nothing will heal them. This, we believe, is the best general healing remedy to be had. Use it for wire cuts, sores, collar galls, or wherever a simple healing action is required.

Fleming's Veterinary Eye Lotion

For weak, watery, swollen, sore, and inflamed eyes among animals. It will not cure blindness, and may not restore the sight in cases of partial blindness if the eye structure has become impaired. Excellent for Moon Blindness, but no remedy can be depended upon to prevent recurring attacks of that trouble.

Fleming's Chemical Hornstop

This is used on young calves to prevent the development of horns, which is easier and more agreeable than sawing off the horns when they have grown. It should be used before the horns come through, preferably at three to ten days of age. Put up in collapsible tubes, each sufficient for twenty-five or more calves.

ORDER BLANK

Any Six-Dollar Assortment for Five Dollars

Two bottles of the Knee-Sprung Cure, or three bottles of any of the two-dollar remedies, or any kind of an assortment amounting to **Six Dollars** according to prices quoted below, will be supplied for **Five Dollars**.

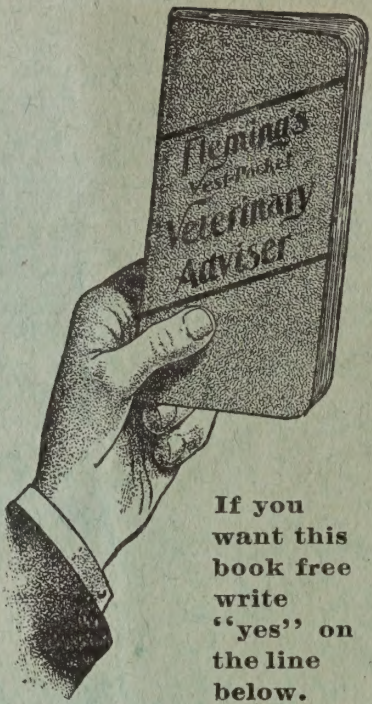

To secure this reduction the remedies must be ordered from us direct, and **the entire six-dollar lot must be ordered at one time.**

Orders are filled promptly, the remedies being sent by mail in special safety mailing cases, and safe delivery is guaranteed.

Fleming's Almanac for 1911

The astronomical data given in this almanac is adapted to the parallel of latitude extending across the United States in approximate line with Newport, R. I.; Wilkesbarre, Pa.; Cleveland, Ohio; Joliet, Ill.; Des Moines, Iowa; Omaha, Neb.; Cheyenne, Wyo., and Salt Lake City, Utah, and in other latitudes will be slightly inaccurate according to distance north or south of this parallel. Such inaccuracy, however, exists in all almanacs, and is of slight importance within the territory in which the almanac is usually distributed.

In this almanac the calculations are given according to the apparent motion of the real sun; in other words, according to solar time. Consequently, the data given is applicable alike to Eastern, Central and Western states, excepting the moon's changes, for which the time is given separately at the bottom of the calendar pages.

The Year 1911

The year 1911 comprises the latter part of the 135th and the beginning of the 136th year of American Independence.

The year 5672 of the Jewish era begins at sunset on September 22d, 1911.

The year 1329 of the Mohammedan era begins on January 2d, 1911.

January 1st, 1911, is the 2,419,038th day since the beginning of the Julian Period.

Phenacodus' Middle Toe

Certain scientists known as zoologists who make it their business to study the origin of animals by means of fossil remains found preserved in ancient sedimentary rock formations, tell us that the horse is descended from a line of ancestry leading back to the beginning of the third geological period, ages before man came to acquire dominion over the earth.

If we are to believe all they tell us, the earliest known ancestor of the horse was a very different and inferior animal, scarcely larger than a good-sized sheep, and having, instead of hoofs, long feet with five toes.

They have found his skeleton and have given him a name—Phenacodus Primaevus.

Phenacodus differs considerably from the modern horse, but most strikingly in that everything below what we call the knee and hock joints was, with him, all feet and toes; in other words, the knees and hocks of the horse were the ankles of Phenacodus.

That so radical a change should come about in the progeny of this early type of horse, if we may accord him the dignity of the name, is next to unbelievable until we take into consideration the vast period of time, covering probably hundreds of thousands of years, during which the evolutionary forces have been active. But, it might be asked, why should there have been any evolutionary changes at all, even though vast ages have elapsed since the time of which we are thinking? One answer, at least, is that conditions upon the earth have undergone a series of changes, so that, in order to survive, each living thing has had to adapt itself to a succession of environments. Some of the ancient forms of life have been unable to do so throughout all the changes that have taken place, and are now extinct, but, fortunately for the world of today, not so with the ancestry of the horse.

In the case of Phenacodus, the indications and probabilities are that in his time the earth's surface was wet, soft and swampy, and his large foot with five long toes capable of spreading over a considerable surface, was just the kind of foot that would serve him best. He was comparatively slow in motion because ground of the kind upon which he lived would not tend to develop fleetness, either in himself or any enemies that he may have had. As the ages passed the ground became more dry and firm, and less spread of foot was needed. Phenacodus, through ambition or in escaping animals that would devour him, found that he could make better speed by traveling upon the toes of his long feet, and without permitting the heels to come into contact with the earth, so he adopted that mode of going whenever in a hurry. As a result the foot grew stronger in those parts upon which the most stress came, while other parts, relieved of a great portion of their former labor, grew smaller and weaker. This

change in the foot went gradually on as generation succeeded generation, and meanwhile the earth became more solid and enemies more swift in pursuit. Our queer prehistoric horse ceased walking flat-footed altogether, and traveled more and more upon his toes, with what had been the foot in a more and more upright position, thus adding to his length of limb. The middle toe developed large and strong, while the outer ones grew smaller and finally disappeared. Of the three that remained, the middle one gradually assumed the whole load, while those at either side diminished until they no longer reached the ground, and finally we have the horse, with his beautiful and efficient leg, foot and hoof, an evolutionary development of the middle toe and toenail of Phenacodus, and with what we call the splint-bones as rudiments of the last two toes to disappear.

Such is the history of the origin of the horse as told by fossil remains that have been found representing several stages in the evolutionary development of his ancestors, to which scientists have given various names, poor old Phenacodus proper having been considered extinct as soon as he began to lose his toes.

A prominent veterinarian once said that half the practice of those engaged in his profession consists of the treatment of ailments occurring below the knees and hocks of horses. Perhaps it would not be amiss to consider the frequency of trouble in these parts another evidence of their origin, and also evidence that there is still need for evolution toward greater perfection in this present-day representative of Phenacodus' middle toe.

The Most Useful of Animals

Regardless of what is known or guessed at concerning ancestral types of the horse, it can scarcely be denied that he has been the most useful to man of any animal that the earth has ever produced. Since the earliest civilization, history finds him man's close companion and ever-willing servant, both in peace and war, and that he will so remain while the human race endures, finds affirmative argument in the fact that he continues to appreciate in value in spite of inventive genius and gasoline.

It may have been our good old father Adam, at the time he undertook to name all the beasts of the earth, who first recognized the possibilities for usefulness in the horse, and he may have appropriated him to his personal service then and there. If so, he likely became the original veterinary practitioner not long afterward, and every owner of live stock since his time has had more or less occasion to be concerned in the art of healing animal diseases.

Though in modern times the work has gradually assumed the status of a science and a profession, millions, and perhaps we might safely say a majority of those who breed and grow the live stock of the country, rely upon their own efforts principally, and call a veterinarian only occasionally, if at all. There

are also thousands of rural places where the possibilities for establishing a practice are not sufficient to attract a veterinarian and where professional help could not be had, no matter how serious the need might be.

Our Business

It is our business to be of help to the farmers and stock raisers throughout the whole country, who, either through preference or necessity, give personal attention to the treatment of their ailing stock.

For fifteen years this help has been available even to those in the most remote places, and it is a kind and quality of help that was not to be had until we offered it, nor is it to be had today from any other source.

Fleming's Veterinary Remedies

This line of preparations includes several that are for serious ailments; in fact, those that we regard as our principal and leading remedies are for diseases that were quite commonly considered incurable, until, by means of these very remedies, it was proved that most cases would yield readily and completely when properly treated.

In saying the above we refer more particularly to the Lump Jaw Cure, Fistula and Poll Evil Cure, and Spavin and Ringbone Paste, though we might, in almost equal truth, include several of the others. As an illustration that points in an emphatic way to the value of the work that our remedies do, we refer to a letter published elsewhere in this almanac, in which the customer states that he has cured more than two hundred cases of Lump Jaw by use of our treatment, and has not had a single failure. When it is considered that at the time we placed this remedy upon the market Lump Jaw was classed among the incurable diseases, and it was a common practice to kill affected animals for their hide, the importance of Fleming's Lump Jaw Cure to the cattle interests of the country may be seen in its true perspective.

Our Business Policy

Our purpose has always been to render a greater service than we receive—to do our customers more good than they can do us.

If, for instance, we sell a remedy for two dollars and it saves an animal worth a hundred times that amount, the purchaser has been benefited most by the transaction, and that is just the way that we like to have it turn out.

But we cannot always be sure of success—there is no such thing under the sun as a sure cure for any disease, and no matter how good a remedy may be, it will fail sometimes.

For the protection of the customer, Fleming's Remedies are guaranteed. If one does not get his money's worth in the way of results, he may have his money back. It was

a new thing when we began it, for a line of veterinary remedies to be guaranteed in so bona fide and definite a way. It involved not only a severe test for the remedies themselves, but was also a test of the public honesty, and we are glad to say that both proved good.

What "Money's Worth" Means

Getting one's money's worth may or may not mean a complete cure. It depends upon the kind of disease that is being treated. For instance, there is little use in benefiting a case of Lump Jaw and not curing it. The same is true of Fistula and Poll Evil. Money's worth in such cases may reasonably mean a cure. On the other hand, an incurable case of Heaves might easily be benefited to an extent worth far more than the cost of the remedy.

The customer is to be the judge, as you will see by reading our guarantee on the inside of the back cover of this almanac. He is to decide whether or not a remedy purchased from us has been worth to him the price he paid for it; and if it has not, we will refund the money.

Of course, as a matter of common fairness, he is expected to write, fully describing any case that does not progress favorably within a reasonable time, and if in the end the treatment is not satisfactory he should not wait a year before letting us know about it.

Convenient to Obtain and Easy to Use

No matter where you live, you can order Fleming's Remedies by mail, and receive them by mail within a few days. We fill all orders on the day they are received or the day following, depending upon whether they reach us in the morning or evening. The packages are small in size, but large in the work they do, and we prepay the postage.

For reasons explained on the inside back cover page of this book, you cannot depend upon your druggist being able to supply you, but you can depend upon getting the remedies direct from us, fresh from our laboratory, and in proper condition to afford the best results.

Though some of our preparations are for diseases of the most obstinate character, they are all so easy to use that any person at all accustomed to handling animals can employ them just as successfully as we could use them ourselves. Complete directions accompany every package, and they tell you in detail just how to go about it; and besides, if at any time you feel the need of further information, you may write describing the case and explaining what seems to be the difficulty, and we will give any additional instructions that seem to be needed.

Things We Do Not Do

We do not open accounts or supply the remedies in any way on credit. The amounts are too small to permit the expense of making

collections, so we treat all alike in that regard, and require that all send remittance with the order, always with the understanding, however, that the amount will be refunded if results are not satisfactory to the customer.

We do not fill C. O. D. orders, except when the order is for a considerable quantity of goods, sufficient to make up an express shipment, and a sufficient remittance is made to cover express charges both ways, the latter provision being for our protection in case the package is not taken up on its arrival.

We do not guarantee that one bottle of the Fistula and Poll Evil Cure will always be sufficient for a case, nor do we supply additional bottles on trial or credit, where more than one is needed. Our guarantee protects you, and a cure is worth the price of several bottles, provided several are needed. It is a fact, however, that proper use of a single bottle or less will cure in fully eighty per cent. of the cases.

Neither do we guarantee that a single package of the Tonic Heave Remedy will be sufficient to cure the curable cases, or afford all that is possible in the way of benefit in those cases that can only be relieved. In connection with the price list on the inside of the back cover, we give as definite information of this kind as we can concerning each of the several remedies.

We do not urge any one to continue the treatment of an obstinate case longer than is justifiable, or longer than he personally feels disposed. All we ask is that our remedies be given a reasonable chance, and that those who use them will be as fair with us as we are disposed to be with them.

Making Remittances

The best way of making remittance is to send a post-office or express money order, or Chicago exchange. Currency enclosed is scarcely safe unless the letter is registered.

Some find it more convenient to send a personal check. We do not object to accepting checks from reliable persons, provided the sender will be thoughtful enough to add ten cents to the amount to cover cost of collection, for that is what Chicago banks charge for collecting out-of-town checks, regardless of how small the amount may be.

There is another thing that we might mention here for the benefit of those who are likely to be careless in that regard. Almost every day we receive one or more letters or orders from which either the signature or address is missing, so that all we can do is to wait until another letter comes asking why attention has not been given. In doing business by mail, one should always make it a point to see that the name and full address is written distinctly upon every communication he sends.

Testimonials

In this almanac we publish quite a number of testimonials received since the 1910 num-

ber was issued.

We consider that nothing serves better to set forth the true merit of a remedy than the statements made by those who have put it to the practical test.

For us to say that Fleming's Remedies are good, that they will usually do the work expected of them if given any kind of reasonable chance, that we guarantee them to do it, and that they actually save millions of dollars every year to the farmers of the country, is all true enough, and might impress you as being sufficiently true to justify your giving them a trial, but, even so, you would like to hear what some one else has to say in the matter.

We have never solicited testimonials, or offered any inducements of any kind, but we receive them every day—letters of the same order as those published in this book. And we appreciate them. When a man goes to the trouble of writing to tell of the help he has received, and especially when he enters into the interesting and newsy details, as some of these writers have done, it means that his heart is in the right place, and that he desires that others shall profit through use of the remedies that have been a means of profit to him. We take this occasion to thank those who have sent us testimonials, and to say that the favor shown by each writer is very gratifying to us, even though we have space to publish only a small percentage of the letters received.

Be Sure to Get Fleming's

Every successful thing has its imitators, and from time to time preparations imitating our remedies as closely as possible have been put upon the market, apparently under the mistaken supposition that in order to attain a sale it would only be necessary to put out something that looked like Fleming's. It may be that some of these are still being offered, so if it is Fleming's that you want, see that the word "Fleming's" appears upon the label. You will then know that you have procured a reliable article, put out by an old established and reliable concern, and backed up by a reliable guarantee.

(Continued from page 1.)

Eclipses for 1911

In the year 1911 there will be two eclipses—both of the sun.

The first is a total eclipse of the sun, April 28th, at 4:50 p. m. Visible here only as a partial eclipse. Visible also to eastern Australia, New Zealand, the Sandwich Islands and the south eastern portion of North America.

The second is an annular eclipse of the sun, October 22d, at 9:40 in the morning. Invisible here. Visible to Asia, Australia and the Philippine Islands.

Morning and Evening Stars

The Planet Venus will be Evening Star until September 15th, then continue as Morning Star until the end of the year.

The Planet Mars will be Morning Star until November 25th, and will then be Evening Star until the end of the year.

(Continued on page 6.)

Fleming's Lump Jaw Cure

Lump Jaw is a disease of cattle—a hard lump forming upon either the upper or lower jaw, or back of the angle of the lower jaw below the ear, then it softens, breaks and discharges a thick stringy pus. It is a specific germ disease and results from accidental inoculation. We have never known of a single well-defined case among horses, and Fleming's Lump Jaw Cure is not intended to be used in treating such lumps as may from various causes develop upon the jaws of horses. We mention this because some order with a view to treating such cases, supposing it to be a remedy for any kind of lump that may appear in the region of the jaws of any kind of animal. Detailed information regarding Lump Jaw is given in Fleming's Vest-Pocket Veterinary Adviser, and need not be repeated here.

Read the letter immediately following showing two hundred cases cured without a failure. Mr. Thomas is a Veterinarian, and knew how to use the remedy to best advantage, but even so, no ordinary remedy would do such work, and besides, it is easy to use and the directions we give will enable anybody to apply it properly.

If you have a case of Lump Jaw, you must cure it or lose the animal, and Fleming's Lump Jaw Cure is the one remedy that has been used and relied upon by thousands of farmers and stock growers for fifteen years, is known to be successful, and guaranteed to cure.

Per bottle, \$2. See assortment offer on inside of back cover.

Mailed prepaid on receipt of amount.

Cured Two Hundred

Gentlemen:—I am well pleased with your remedies. Have treated over two hundred cases of Lump Jaw with your Lump Jaw Cure, and have not had a single failure. Your other remedies that I have used are likewise all right.—E. Thomas, V. S., Arlington, S. D.

Offered for Half Her Value

Dear Sirs:—I think it my place to write and tell you how I came out with the Lump Jaw Cure. My cow that had the Lump Jaw is six years old, and I offered to sell her for twenty-five dollars, but no one wanted her. The cow is today worth sixty dollars instead of twenty-five. I applied the remedy only three times, and have two-thirds of it left for the next case that comes.—D. K. Weir, Holden, Mo.

Left No Scar

Dear Sirs:—I got one bottle of Fleming's Lump Jaw Cure last fall, and I cannot help recommending it very highly because it has cured my cow and never left a scar.—H. F. Stratmann, Sparta, Ill., R. No. 4.

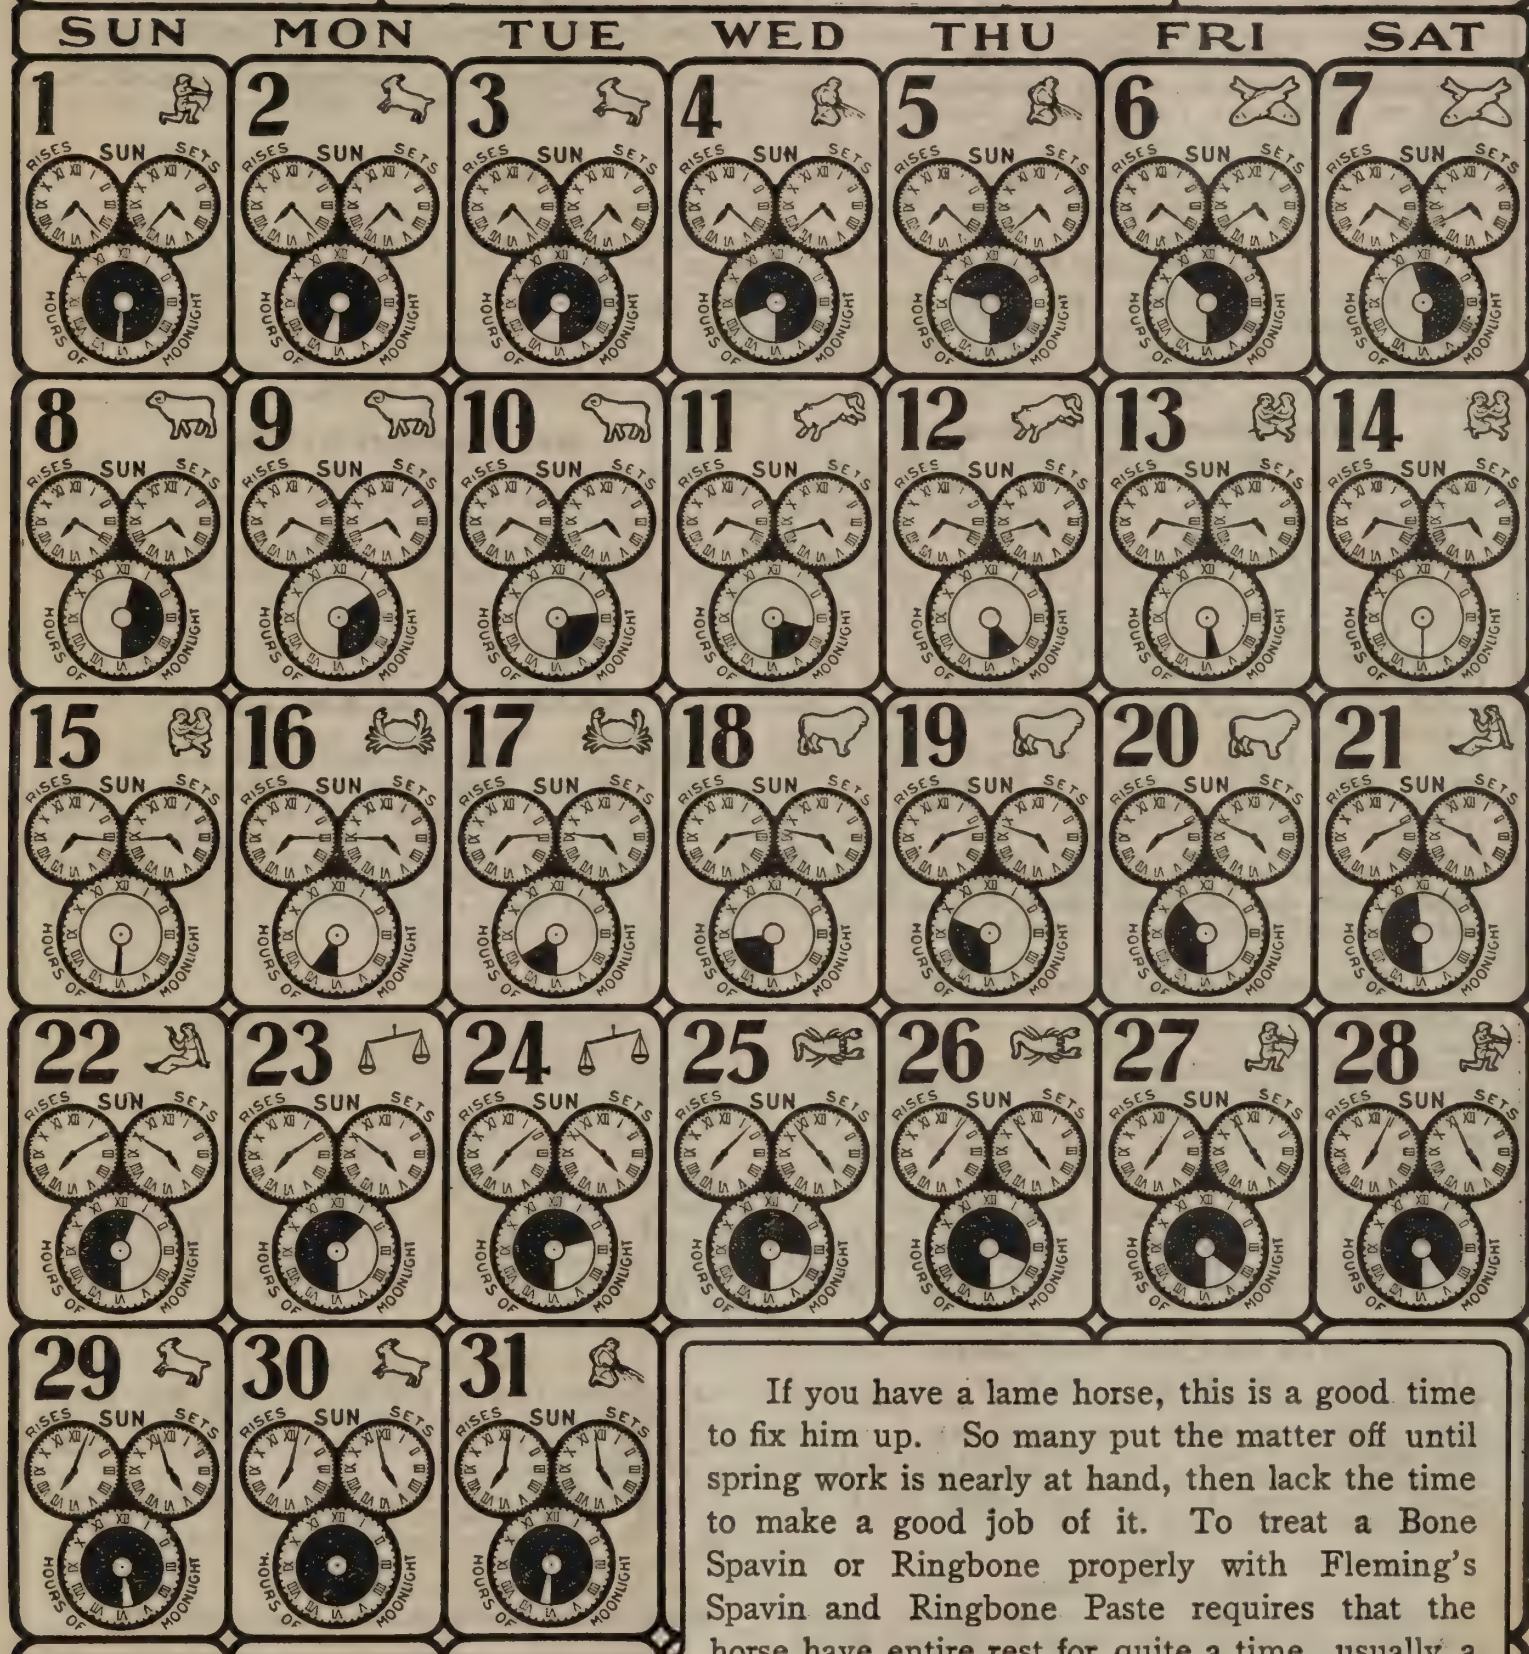

Inspector Gave Good Advice

Gentlemen:—I was at the National Stock Yards about two years ago, and I made some inquiry as to what would cure Lump Jaw. Some one pointed me to the inspector, who was sitting near the gate to the scales. I made my case known to him, and he said: "Send to Chicago for Fleming's Lump Jaw Cure." I did

Hours of the Night that will
be Lighted by the Moon

If you have a lame horse, this is a good time to fix him up. So many put the matter off until spring work is nearly at hand, then lack the time to make a good job of it. To treat a Bone Spavin or Ringbone properly with Fleming's Spavin and Ringbone Paste requires that the horse have entire rest for quite a time, usually a

month to six weeks. Sometimes, too, more than one application is needed, and that is another reason for making an early start. Every spring we receive hundreds of letters asking whether it will be possible to cure a Spavin or Ringbone within a couple of weeks, or some such time as that, and we have to say no. Good intentions never cured a Spavin or accomplished anything else,—its making the move that counts.

so, and it cost me two dollars, but it cured all of my cattle that had it. Please send me your Veterinary Adviser.—George W. Cooksey, Cooksey, Mo.

Cured the Doctor's Cow

Gentlemen:—Enclosed find one dollar for which send me Fleming's Tonic Heave Remedy. Last winter I ordered a bottle of your Lump Jaw Cure, which was very effective in curing a valuable cow that had Lump Jaw.—M. E. Headland, M. D., 216 Center Ave., Butler, Pa.

Bottle Cured Four

Dear Sirs:—The bottle of Lump Jaw Cure that I bought of you two years ago has cured four head of cattle for me. I can highly recommend it.—F. E. Bird, Rockford, Ia., R. No. 4.

Saved a Steer for his Neighbor

Dear Sirs:—Several years ago I ordered a bottle of your Lump Jaw Cure. I used it only twice and it cured the case I then had. A little later my neighbor had a three-year-old steer that had a very bad Lump Jaw, and he considered him of no value. I told him I would try to cure him. He was wild and strong and very hard to manage, and I wasted a good deal of the medicine trying to put it on him. When the bottle was used he wasn't cured, so I procured another, got some help and roped the animal good so he couldn't move. The neighbors all said I could do him no good. You could put a quart cup in the hole in his jaw, and you could smell him a good ways. I treated him in this way a couple of times. This was in the summer, and in the autumn the steer sold on the St. Louis market for something over sixty dollars. He was perfectly sound and passed the inspection all right.—E. G. Arnold, Paris, Mo.

Two Applications Cured Bad Case

Gentlemen:—I have tried your Lump Jaw Cure. It is all you recommend it to be, for it surely does the work and I cannot speak highly enough of it. My cow was in a very bad shape, and her jaw was growing very fast. Two applications did the work. It is a grand medicine and will do all that you say.—Fred A. Steiner, Mitchell, Nebr.

P. S.—I also tried your Heave Remedy and know that it is good for it cured my horse. I had a bad case, but one box did the work, and he can do as much work as any of the others.

The Only One That Cured

Dear Sirs:—Please send me your Vest-Pocket Veterinary Adviser. I have used one bottle of your Lump Jaw Cure, and must say it is the only medicine I have ever tried that would cure Lump Jaw, and I can say further that I have never yet failed to cure one with it.—J. Y. Yates, Maryville, Mo., R. No. 4.

Cured Ten Cases

Dear Sirs:—I have great faith in your Lump Jaw Cure. I have been using it off and on for the last seven years, and it has never failed to do the work yet. I have cured ten head of cattle with it.—Fred G. Boelts, Archer, Nebr.

Saved Seventy-Five Dollar Cow

Sirs:—I sent for one bottle of your Lump Jaw Cure and it saved a cow for me that I value at seventy-five dollars. I am sure that your remedies will do what you say they will, and that they are not misrepresented.—I. N. Maust, Bloomsburg, Pa., R. No. 1, Box No. 18.

The Only Reliable Remedy

Gentlemen:—I bought a bottle of Lump Jaw Cure from you, and have cured two cases of Lump Jaw with it, and still have half of the bottle. I consider it the only remedy ever sold in Tennessee that can be relied upon to cure Lump Jaw.—L. Brown, Belfast, Tenn.

Bottle Worth Fifty Dollars

Dear Sirs:—My cow had an advanced case of Lump Jaw, but after using about half of a bottle of your Lump Jaw Cure I find that she is successfully cured. I claim that this bottle has been worth fifty dollars to me, and I shall speak a good word for you whenever I have the opportunity.—I. P. Hayes, McLeansville, N. C., R. No. 1, Box No. 64.

Had It Three Years

Dear Sirs:—The medicine that I got from you to treat the case of Lump Jaw on my cow has done the work. Her head is as smooth as any of my cattle, and has been for eight months. She had the disease for nearly three years before I got the remedy. It does all you claim for it, and I wish you luck and long life.—J. A. Monroe, Morrowville, Kansas.

Had Decided to Kill Her

Gentlemen:—Two years ago one of my cows had a bad case of Lump Jaw, in fact she was so bad that I took her out of the herd to kill her, when a friend came along and told me of your excellent remedy. I procured a bottle and it cured her right away. She is still alive and one of the best cows I own.—P. Sheridan, Prop., The Midway Farm, Mohall, N. D.

Couldn't Tell He Ever Had It

Gentlemen:—Nine years ago this fall I was fattening a carload of cattle and one of my steers took the Lump Jaw. He was one of the best in the lot. I used your Lump Jaw Cure, and when I sold this bunch of cattle in Chicago you couldn't see that anything had ever ailed him. I write this that it may encourage some one else that has trouble of the kind.—Gerhard Herwig, Mason City, Ill.

Never Failed

Dear Sirs:—Your Lump Jaw Cure can't be beat. I got a bottle three years ago and have cured five cases of Lump Jaw with it. It has never failed.—Hial Pooler, Northport, Wis.

Fine Cow Condemned

Gentlemen:—I have a cow that a veterinary surgeon told me six or seven years ago to take out and kill. I got a bottle of your Lump Jaw Cure, and the result is that I have this cow yet, and she is a fine one.—F. P. Chick, Metropolis, Ill., R. No. 3.

The Planet Jupiter will be Morning Star until April 30th, thence Evening Star until November 18th, then continues as Morning Star again until the end of the year.

The Planet Saturn will be Evening Star until May 1st, thence Morning Star until November 10th, and then Evening Star until the end of the year.

Mars is called the Ruling Planet for 1911.

A Year Without a Summer

Ninety-five years ago a strange and very disastrous weather phenomena occurred. The year 1816 was practically without a summer, and during every month there was frost and freezing. The following is from a diary kept by a man named Charles Pierce:

"July, 1816: The medium or average temperature of this month was only sixty-eight degrees, and it was a month of melancholy forebodings, as during every previous month since the year commenced there were not only heavy frosts, but ice, so that very few vegetables came to perfection. It seemed as if the sun had lost its warmth and cheering influences. One frosty night was succeeded by another, and thin ice formed in most exposed situations in the country.

Fleming's Colic Cure costs
one dollar,—there's no saying
what the cost of not having
it may be.

Have you a copy of Fleming's Vest-Pocket Vetri-
nary Adviser? More than half a million copies have
been distributed free of charge to farmers throughout
the country, and we are willing to distribute that many
more provided they are asked for by actual farmers who
own live stock. We receive many requests from Agri-
cultural Colleges, Humane Societies, U. S. Army
officers, and other institutions and persons desiring the

Adviser in quantities for distribution, but we cannot attempt to supply them for such purposes.
The book is meant to be a help to farmers who more than any other class, aside from practicing
veterinarians, have occasion to make use of knowledge regarding animal disease, and we want to
keep its distribution among those for whom it was originally intended. If you are a farmer you are
entitled to a copy, and it will be a help to you.

Fleming's Fistula and Poll Evil Cure

This remedy cures not less than ten thousand horses every year, and cures them at an average cost to their owners scarcely exceeding two dollars per horse.

That, you will agree, is a marvelous performance, provided you know anything about the obstinate nature of Fistula and Poll Evil, and the horrible appearance that a bad case presents.

We frequently hear from people who have spent for other forms of treatment and upon a single case, all the way from twenty-five to seventy-five dollars, and still no cure—nor any money back.

When you use Fleming's Fistula and Poll Evil Cure the expense is insignificant by comparison—and your money is returned if a cure is not effected.

Another point worthy of mention is the simplicity of the treatment, and the ease with which the remedy is used. No cutting to be done, and no attention required except to apply the remedy every fifth day, which takes but a few minutes' time.

But, most important of all, is the effectiveness of Fleming's Fistula and Poll Evil Cure. It nearly always cures even the very bad old cases, failing only occasionally. It will be unnecessary for us to say anything further upon that point, as sufficient evidence of merit will be found in the letters that follow, of which we publish quite a number.

Some cases are, of course, more difficult to cure than others, and probably fifteen to twenty per cent. of them require more than a single bottle of the remedy, but even so, the cost will be slight compared with the value of a cure, and, on the other hand, most cases are cured with one bottle or less, and sometimes a bottle is sufficient for several. Where difficult cases are encountered, we expect to be given a full history of them and information as to just what they are like, before it is decided to abandon the effort, but we will not urge any undue perseverance. We are always glad to render any assistance that we can, but the customer is the judge, and whenever he feels that it is justifiable to give a case up, we are ready to refund his money.

Fistula and Poll Evil are described at length in Fleming's Vest-Pocket Veterinary Adviser. If you haven't a copy, ask us for one.

Per bottle, \$2. See assortment offer on inside of back cover.

Mailed prepaid on receipt of amount.

Fleming's Fistula Syringe

This syringe is especially designed for applying Fleming's Fistula and Poll Evil Cure in

advanced cases of Fistula and Poll Evil. Many of the cases of either disease may be successfully treated without it, but the work is easier done and results are apt to be more prompt when it is used, and a common short-nosed syringe is usually worse than useless. These syringes are made to order for us, and the pipe or nozzle is three inches in length, so that it will reach well down into the openings. The pipes are detachable, and extra ones can be supplied in case of breakage.

Complete Syringe, by mail, 50 cents.

Extra Nozzles, each - 20 cents.

Doctor Tried for Six Months

Dear Sirs:—Three years ago I used your Fistula and Poll Evil Cure on a horse that a veterinary had been treating without success for six months. Your remedy cured her in three weeks and the mare is sound as a dollar today. —A. S. Brian, Mt. Kisco, N. Y. Breeder of high-class white Plymouth Rocks.

Attracted the Buzzards

Gentlemen:—I ordered one bottle of your Fistula and Poll Evil Cure and used it on a four-year-old bay road mare. I think it was the worst case of Fistula I ever saw. It broke on both sides and the matter ran clear down to her hoofs. The odor was so bad that crows and buzzards would fly around after her. I had no hope for her, but thought it a good case on which to try your remedy. It cured her up sound and well, and did not even leave a scar. It is the greatest medicine I ever used.—Chester E. Reed, Roseville, Ill., R. No. 2.

Horse Had Both Diseases

Gentlemen:—I take pleasure in informing you that I think your Fistula and Poll Evil Cure is the "only thing." My horse had the very worst kind of Fistula on each side of his withers, and Poll Evil on each side of his head. I used about two and a half bottles of the remedy, and am pleased to say that he is completely cured. Due to remedies I had used before using yours he is somewhat scarred up, but otherwise is as good as ever.—Matt C. Manger, Chillicothe, Ohio.

Bottle Cured Three Bad Ones

Gentlemen:—Four years ago I sent to you for a bottle of Fistula and Poll Evil Cure. I cured two bad cases of Poll Evil which one of the best veterinarians in this part of the country had been treating for almost a year without avail. I used only one-third of the bottle, and sold the balance to a neighbor who cured two of the very worst cases of Fistula I ever saw with it.—G. B. Winniford, Wilbur, Ore., R. No. 1.

Looked Like Head Would Come Off

Dear Sirs:—Your Fistula and Poll Evil Cure worked like a charm. My horse was a horrible looking sight. He was broke on both sides of the head, and it looked almost like his head would come off, but when I trust to another man's cure I go by the directions, and it cured him sound and well. You couldn't tell that he ever had a pimple on his head, and I sold him to a horse buyer for \$190. I have recommended your medicine to all my neighbors, as I believe it is all right where it has a chance.—John W. Inks, Monterey, Ind.

Three Horses Saved

Dear Sir:—The last bottle of Fistula Cure is doing the work fine. Soreness and swelling all gone and horse is feeling good. Just a little pus discharging, but that ought to quit soon. This makes the third horse you have saved for me.—H. H. Storla, Lehr, N. D.

to luck,—keep
Fleming's Colic
Cure handy.

Get
Them
Ready
For
Work

Lack of regular exercise, eating dry food, drinking ice cold water, etc., tend to derange the digestion and lower the tone of the whole system, so that a very large percentage of farm horses are in a more or less disordered state at this season of the year. Give some variety of food, let bran make up a part of the grain ration, and don't spare the curry comb. Let them have some grass as early as it is to be had. Fleming's Tonic Heave Remedy is an excellent spring medicine for horses. It is not a condition powder, but a tonic and blood purifier that puts a horse in shape to do his best all summer long. Your money back if you are not satisfied.

Would Seem Unreasonable

Gentlemen:—I have been using your remedies for the past seven years with great and good results. I have never failed to cure a case of Fistula with it. One of them took me quite a while, but it was a bad one of years' standing. I could write you of cures I have made with your remedy that would sound unreasonable, but it would be true. I have recommended your remedies to hundreds of farmers.—John Ware, Breckenridge, Texas.

Bone Decayed Away

Gentlemen:—I am able to report that I have my mare cured. There were ten holes, all of which were healed in October, then it broke in a new place, but that is all healed now. The tops of her shoulders are gone, also some of the backbone in front of the shoulders, but she is as sound as ever. This mare is a good advertisement for you, as she is known for 125 miles around here, and if any affidavit is wanted I will be only too glad to give it to you.—Emil Wolff, Elk, Wyo.

Cured Thirty-Five

Dear Sirs:—I have not lost a case of Fistula or Poll Evil in the three years since I began using your Fistula and Poll Evil Cure, but in this time have cured thirty-five.—Dr. H. B. Van Winkle, V. S., Brooklyn, Ill.

Still Sound at Twenty-Two

Gentlemen:—I have an old cow pony that had one of the worst cases of Fistula I ever saw. It broke on both sides of the withers and the pus would run to the ground. I was advised to shoot him after I had used all the remedies I knew of and all the free advice I could get. I then heard of your Fistula and Poll Evil Cure, obtained a bottle and made two applications. The pony then got out on the range and it was four months before I saw him again. To my surprise he was sound and well. At that time he was fourteen years old. He is living now, is hale and hearty, and will be twenty-two years old this spring.—J. G. Holloway, Cherino, Texas, R. No. 1.

Made Good Profit

Dear Sirs:—Some time ago I bought a horse with Fistula for \$40, used your Fistula and Poll Evil Cure, cured it up and sold it for \$200.—Isaiah White, Holdrege, Nebr.

Saved \$160

Dear Sirs:—The bottle of Fistula and Poll Evil Cure that I sent for last summer worked to perfection. I cured the four-year-old horse that had a Fistula on each side of his shoulders. The horse is just as good as ever, and I used only about half of the bottle. It cost me two dollars and saved me at least \$160.—Louis Herring, Black Earth, Wis., R. No. 1.

Tendinous Quittor

Gentlemen:—I had the worst case of Tendinous Quittor I ever saw. It had been tinkered with as a wire cut for three weeks, and the lateral cartilages and a large part of the sensitive sole sloughed out. The animal could not put its foot to the ground. I used less than a bottle of the Fistula Cure and sent the horse home perfectly sound except for a slightly swollen fetlock which I am now blistering down. It was a \$200 animal, and the owner was going to have it destroyed. I have doctored many cases of the same nature and before this have had but three that did not leave a stiff ankle. Am very glad to report such a successful cure.—Richard Bennett, V. S., Lancaster, Texas.

Not Bad as It Is

Gentlemen:—I ordered three bottles of your Fistula and Poll Evil Cure about two years ago. I have cured one bad Fistula, two cases of Quittor, and am treating another case of Fistula

now. I can send you a good testimonial if you want it.—L. M. Etheridge, Clito, Ga.

Doctored Seven Months

Gentlemen:—I bought two bottles of your Fistula and Poll Evil Cure and cured a bad case of Fistula that had been treated by veterinarians for about seven months and was getting worse all the time. I also cured a fistulous sore on another horse's shoulder that had been causing a great deal of trouble.—Charles E. Stevens, Leipsic, Ohio, R. No. 2.

Had Eleven Pipes

Dear Sirs:—I cured a horse of Fistula with one bottle of your Fistula and Poll Evil Cure. There were eleven pipes, and he was as rotten a looking horse as you ever saw.—S. O. Smeaton, Harmarville, Pa.

Pronounced Incurable

Gentlemen:—I wish to say that my horse is entirely cured and you can't see where the sore was or detect a scar. Three veterinarians told me it could not be cured, but your remedy did the work in two months, and the horse has been at work all summer. I cannot thank you too much for this successful cure.—Mrs. Nellie Fountain, Canandaigua, N. Y., R. No. 2.

Pipes Sixteen Inches Deep

Dear Sirs:—I write you concerning my horse. He is a large horse weighing 1,300 pounds. He had the Poll Evil and there were five holes in his head and one down on his neck. Some of them were sixteen inches deep. You said it was one of the worst cases you had ever heard of. I bought three bottles of your Fistula and Poll Evil Cure, and have about half a bottle left. I have waited one year, and he is still all right. One man told me he would not put a bridle on for him, and that the best thing I could do would be to take him in the hills and shoot him, but I notice that he takes quite a fancy to him now, and would like to have him himself.—R. Galloway, Clawson, Idaho.

Five Hundred Would Testify

Gentlemen:—I want to tell you about that horse of mine that had Poll Evil. He took it about two years ago on one side and I had a veterinary treat him for about one year. At the end of that time his head was running on both sides and he was in such bad shape that he could hardly walk. I couldn't have sold him for five dollars. My brother got one of your Veterinary Advisers by mistake of the mail carrier and I was looking at the book and saw that you have a remedy for Poll Evil. I ordered a bottle, and when that was used I ordered another, which cured him sound and well, and today I would not take \$200 for him. I could get 500 people to testify to the result in this one case, as the horse is known throughout this section.—Ed McClure, Paris, Tenn., R. No. 2.

Worth Trying on Any Case

Dear Sirs:—I have a six-year-old mare mule that had the Poll Evil, and it was a bad case from August, 1906, until October, 1908, when I got a bottle of your Fistula and Poll Evil Cure. It cured her completely in less than eight weeks, and did not leave a scar. I believe it will cure any case that has not affected the bone, and I would recommend trying it on all cases, as it does not cost much and is a wonderful remedy.—J. V. Plummer, Herrick, S. D.

Neck Nearly Rotted Off

Gentlemen:—Your Fistula Cure has done a wonderful cure. It cured a case of Fistula that had been doctored a year and a half without any result, and the mare's neck seemed to be nearly rotted off. In less than a month the mare was all healed up without a scar or mark to show that she ever had the Fistula, and she has worked hard ever since.—John Remmes, Dunlap, Iowa, R. No. 4.

SUN MON TUE WED THU FRI SAT

If you have a horse that does not brace up to the work as he should, is thin, weak, lazy, and listless, there is something wrong with the vital sustaining functions. He is not getting the energizing and flesh-building elements that his food contains, and the processes of elimination are likely sluggish so that impurities have accumulated in his system. We know of nothing that can do more for such a horse than Fleming's Tonic Heave Remedy. It is a tonic and blood purifier that tends to restore to normal balance the functions of digestion and assimilation, and at the same time cleanse the blood of impurities.

A string of horses twenty miles long, as close as they could walk one behind another, would just about represent the cures effected every year with Fleming's Fistula and Poll Evil Cure. In point of annual profit to us, this remedy is not so important as some of the others, but considering it from the horse-owner's standpoint, the actual money value of the work it does makes it the most important of them all. Read the testimonials, and you will realize that there are many thousands of horses at work today that would have been dead but for this remedy.

Hoped Team Would Die

Gentlemen:—I was out of the use of a team of horses for eighteen months. Both had Fistula on both shoulders, or rather both sides of the withers. We tried nearly all of the old-time remedies, but they did no good. I then paid a D. V. S. \$20 to operate, which only seemed to aggravate the trouble. Finally I turned the horses out and let them run for two or three months, hoping they would die so as to get them out of the way. One day a friend asked me why I did not try your remedy. I told him I did not have any faith in curing Fistula, as I had tried everything I had ever heard of without result. My son had more confidence and sent for a six-dollar assortment of your remedies, which included two bottles of Fistula and Poll Evil Cure. In three months' time both horses were cured, and we have used them in our spring work, and the mare has a fine colt besides. At the present time we are breaking prairie sod with four horses. I feel it my duty to let you know that your remedy has saved a valuable team and made me a believer in your goods.—F. W. Gould, Sidney, Nebr., L. Box No. 443.

Won a Ribbon

Gentlemen:—When I wrote you last summer I had almost given up hope for my mare, Asama, sired by Arion. She was a perfect wreck, and I expected she would die any moment. I am glad to inform you that your Fistula and Poll Evil Cure was successful, and I have been driving her now for six weeks. On the 16th day of October I started her in a matinee race of the Fall River Driving Club, of which I am a member, and I won the blue ribbon with her in her class, and also a pair of driving gloves.—J. A. Herbert, Fall River, Mass., Box 719.

Cured Twenty—Never Failed

Dear Sirs:—I thought I would write you a few lines in regard to your Fistula medicine. I have used it for ten years and have cured twenty horses. I have had all kinds of cases, but have never lost a case. I believe it is the only medicine that is a sure cure.—L. J. Schaefer, Troy, Mo., R. No. 4.

Wouldn't Have Her in the Stable

Gentlemen:—Last August I bought a bottle of your Fistula Cure to use on a mare that had a bad case with five openings. The result was so phenomenal that it seems no more than right that I should tell you about it. I was inexperienced with horses, and this was the only case of Fistula that I ever saw, so I can claim nothing for my skill. I gave two applications as nearly according to directions as I could, but after that they were more like a month or six weeks apart. I could not keep the mare in the stable on account of the terrible odor from the sores. I thought I would rather let her die than have that smell around the barn, so I let her go and only gave her an application when she would come home. One of my neighbors told me I had better kill her, but after about three treatments I thought she looked better. About two months ago she came home with one side all well and a very little discharge from one place on the other. I gave her a good application and she is now sound. The hair has all grown back where the discharge had eaten it off. It was all gone from both shoulders when the sores were at their worst. I would not have had the nerve to try to hold you to your guarantee if she had not gotten well, owing to the indifferent way in which I used the remedy.—R. E. Hanna, Yamhill, Oregon, R. No. 1, Box No. 36.

Saved \$200

Gentlemen:—I have used Fleming's Fistula and Poll Evil Cure and have permanently cured a Poll Evil on a three-year-old mare worth \$200. It was so bad a case that my neighbors advised me to kill her.—P. H. McCormick, Bowdon, N. D., R. No. 1.

Wasn't Worth \$10—Now Worth \$225

Gentlemen:—About ten months ago I had a fine horse with a bad case of Fistula. I could not have got \$10 for him. I sent to you for a bottle of your Fistula Cure and in six weeks he was a well horse, and is now worth \$225.—J. Whipple Woodruff, Pataskala, Ohio, R. No. 1.

Thought Us Fakers

Dear Sirs:—Your Fistula and Poll Evil Cure cured one of the worst cases of Poll Evil I ever saw on my old driving mare. I had concluded to let her die, but a friend of mine told me to try your medicine so I concluded to order a bottle. It cured her in less than three months just as sound as she was before she took this terrible disease of the head. She is a valuable old animal, and has raised me two splendid colts since that time, so you can readily see that that little bottle you sent me put several dollars in my pocket. To say the least it is a remedy that is worth its weight in gold. I had seen your advertisement often in the farm papers, but just supposed that you were fakers. Truly you are not.—O. K. Brown, Bentonville, Va.

Saved \$300 Mare

Dear Sirs:—I thought I would write you a few lines and ask you to please send me your Veterinary Adviser. I have used your Fistula Cure on cases where all other remedies had failed. One was a valuable brood mare that I own today. I would have given her away, as I thought she was worthless and the veterinarian advised me to shoot her. I got one bottle of your remedy, and about two-thirds of it cured her. I would not take \$300 for her now.—Jesse Underwood, Danville, Ky., Prop. Fairview Stock Farm.

His Money Refunded

Gentlemen:—No doubt you will be surprised to get a letter from me saying that my case of Fistula is perfectly sound and well. Your Fistula Remedy is certainly a magic. I believe it will cure any case of Fistula or Poll Evil if it reaches the disease. After I had abandoned the use of it and you had refunded the money to me I put my mare in the hands of a man here in this neighborhood who claimed to have had no failures, but he failed on this case. I had not used quite all of the last bottle of your remedy, so I thought I would just finish it up. As I was feeling around with the fistula syringe I found a pipe leading to a small pocket that had been overlooked when I had treated the case before, and it was surprising how speedy a cure followed after I had used some of the remedy at that place. The mare had the disease on both sides and there were six holes in the withers, and your remedy had cured them all except one place, and the reason this place had not healed was because I had never as yet reached this pocket. I am satisfied that she is sound and well now, and I have been working her hard for two or three months since she got well, and no trace of the disease returning. I have always been a little skeptical as to testimonials, but my statements in this letter are true and genuine, and I am willing to go before a notary public and make affidavit. I can also furnish twenty witnesses as to the truth of my statements. I want to say, too, that you acted perfectly fair with me and refunded every cent of money that I had paid you when I made the claim that your medicine had failed to cure. It was not the fault of the medicine, but it was my fault in not locating the disease when applying it, which I succeeded in doing later on after you had sent my money back, and you did it without argument or hesitation. Now I am ready to pay it back to you. I used three bottles of the Fistula and Poll Evil Cure, and it was six dollars that you refunded. I would send the amount in this letter, but I want to call your attention to the bottle of Sweeny Cure I bought of you in the summer. I have applied it several times, and I cannot see that it has done any good. I do not think I will try it again. Now, shall I pay you the six dollars, or

are you willing to make a reduction of one dollar, the price I paid for the Sweeny remedy? Let me hear from you soon.—Joseph Green Milroy, Ind.

Six Easy Cases

Gentlemen:—Two years ago I had a mare that had Fistula. I sent for a bottle of your Fistula and Poll Evil Cure, which cured her, and I have since cured five others and have half of the remedy yet.—I. N. Willhite, Thompsonville, Ill.

Doctor Bought What Was Left

Dear Sirs:—I take pleasure in writing you about your Fistula Cure. I have a mare that I have paid more for doctoring than it ought to take to cure ten horses, so I told the doctor I was going to send for your Fistula Cure. In six weeks from the time I got your remedy she was at work harrowing corn ground and has worked ever since. She is as sound as a dollar. The doctor said it wouldn't cure her. He had tried for a year, and no cure, but it did the work just the same. He came around one day to see how she was getting, and I was working her. It took only half a bottle to cure her, and the doctor bought the other half. I was offered \$150 for her and wouldn't take it, but there was a time when she was sick that I would not have given ten dollars for her.—O. J. Dennis, Irondale, Ohio, R. No. 1.

(Continued from page 6.)

On the morning of July 6th, in Pennsylvania, New York, and through the New England states, there was ice as thick as window-glass. Indian corn was chilled and withered, and the grass was so much killed by repeated frosts that grazing cattle could scarcely eat it. Northerly winds prevailed a great part of the month, and when the wind changed to west and produced a pleasant day, it was a subject of congratulation. Little rain fell during the month.

August, 1816: The medium temperature of this month was only sixty-six degrees, and such a cheerless, desponding, melancholy summer month the oldest inhabitants never perhaps experienced. This poor month entered upon its duties so perfectly chilled as to be unable to raise one warm, foggy morning or cheerful, sunny day. It commenced with a cold northeast rain-storm, and when it cleared, the atmosphere was so chilled as to produce ice, in many places half an inch thick.

Every green thing was destroyed, not only in this country, but in Europe. Newspapers received from England said: 'It will ever be remembered by the present generation that the year 1816 was a year when there was no summer.'

Indian corn raised in Pennsylvania in 1815 sold for seed, to plant in the spring of 1817, for \$4 the bushel, in many places."

Food for Young Goslings

The best thing to feed goslings right after they are hatched is stale bread moistened with milk. After the first day or two add, gradually, a mixture of one-third cornmeal and two-thirds wheat bran until, in a week, the bread is not used at all. After a week add a little high grade beef scraps. After they are two or three weeks old, almost any kind of nourishing mash food may be fed, and later on cracked corn may be given occasionally.

Green Food for Poultry

More than half of the poultry of this country do not have a green thing to eat from December to May. Why not grow each year some beets, preferably the Mangel Wurtzel, especially for your poultry? These beets may be stored so that they can be reached and placed before the birds continuously. A big beet or cabbage head hung up in the hen's house by a stout cord or rope just high enough for the hens to peck at will furnish both food and exercise on a winter's day. Turnips, carrots, onions or clover hay furnish a delightful change in food for poultry

(Continued on page 18.)

Fleming's Spavin and Ringbone Paste

This is unlike any other remedy ever used upon Spavin and Ringbone.

It is not a salve to be spread over the blemish, but a peculiar pasty substance of about the consistency of soft putty, and in treating with it you should cover a spot no larger than a dime, or even smaller if the blemish is small.

Only three kinds of blemishes are to be treated with it—Bone Spavin, Ringbone, and Sidebone, and only the cases that are well defined and causing marked lameness. It is a remedy for the bad cases, even those that have lamed the horse for years, and have been fired and treated in all sorts of other ways unsuccessfully.

Do not try to treat the horse and work him at the same time. He must have rest in the stable and the usual time required is a month to six weeks.

We do not claim that Fleming's Spavin and Ringbone Paste will take off the enlargement, or help the appearance of the part in any way. Instead, it will destroy the hair upon the spot where the application is made, but a scar is better than lameness.

Fleming's Spavin Cure (Liquid) does not scar if rightly used, but that remedy is not intended for blemishes such as we have mentioned above, except when used just as the trouble is starting. It will often cure the older cases, especially when the animal is young, and if you have a fine horse and are particularly anxious to cure without a scar, we know of nothing else so likely to give you the result desired, but remember that we do not guarantee the Liquid for well established cases of Bone Spavin, Ringbone or Sidebone.

But Fleming's Spavin and Ringbone Paste is guaranteed to cure the lameness in any case of the kind, and if it fails to do it you get your money back. There is no need for us to tell how successful this remedy is—the following testimonials tell it, and tell it better than we could tell it ourselves.

For information concerning the different kinds of blemishes and different forms of lameness, see Fleming's Vest-Pocket Veterinary Adviser.

Per bottle, \$2. See assortment offer on inside of back cover.

Mailed prepaid on receipt of amount.

Had Ringbone 10 Years.

Dear Sirs:—I sent you two dollars for which you sent me a bottle of Spavin and Ringbone Paste. It cured a horse that had had Ringbone for ten years, and had been fired three times.—Claborn Bishop, Fairview, Va. R. No. 1.

Could Hardly Get Out of Barn.

Gentlemen:—I want to write you about your Spavin and Ringbone Paste. I had a mare that was so lame with Ringbone that she could hardly get out of the barn. I got a veterinarian to puncture fire it, but did no good. I used all

Perhaps some of your horses are
showing signs of Sweeny. It is
most likely to occur in young horses
that are on their first season's work.
Don't neglect Sweeny,—use Flem-
ing's Sweeny Cure.

Be
Ready
to
Cure
Colic

It is all right to defer procuring most things until the actual need comes, but Fleming's Colic Cure is a thing that you must order when you do not need it if you are to have it when you do need it. Of course, you may never need it at all, but even so you'll feel safer if you have a bottle of it on hand, and that satisfaction alone is worth the dollar that it costs. Read the testimonials about the Colic Cure,—there's no saying when it might save as much for you.

the Ringbone remedies that I had ever heard of, then I saw your advertisement for the Spavin and Ringbone Paste. About one-fourth of the bottle cured her all right. She was so lame I never expected to get any good out of her, and would have given her away. She is twenty years old, and last week I sold her for \$100. If any one doubts your remedies refer them to me.—F. F. Cash, Albia, Iowa.

Made a Good Profit.

Gentlemen:—I had good luck with that Spavin and Ringbone Paste. I paid \$20 for the horse with Ringbone, then after using your remedy I sold him for \$125.—Ferdinand Arp, Gregory, S. D.

Neighbors Laughed.

Dear Sirs:—I got some of your Spavin and Ringbone Paste for a spavined horse last winter and used it with the very best results. My neighbors laughed at me for using it, but they know different now. Please send me your Vest-Pocket Veterinary Adviser.—C. A. Tenny, Victoria, Ill.

Unable to Work.

Gentlemen:—The Spavin and Ringbone Paste that I got from you two years ago worked like a charm. I can now work the mare right along every day, and she had not been able to work for several years before I used the remedy. I had tried many other things, but none of them reached the spot.—Samuel J. Immel, Louisville, Ohio, R. No. 2.

Samuel J. Immel, Louisville, Ohio, R. No. 2.

Sold for \$200.

Dear Sirs:—I had splendid luck with your Spavin and Ringbone Paste. You can hardly see where I used it. The lameness all disappeared and I sold the mare for \$200. I can recommend your remedy to any one who will follow the directions.—N. R. Norton, Norton's Bakery, Breckenridge, Minn.

An Obstinate Case

Gentlemen:—My horse had a very bad case of Ringbone, and I have cured it with your Spavin and Ringbone Paste, but it was obstinate and required three treatments. I wrote you at about the time I made the last application, telling how the remedy acted, and you stated it was all right and that if the third treatment did not cure there would hardly be any use in trying it again. He was still lame for some time after the last sore healed, but this lameness disappeared after a while, and today a man can hardly find the foot that was affected. I thank you heartily for this result, and will say, not only to you, but to every one in need of such a remedy, that I do not believe any one using the Spavin and Ringbone Paste according to directions will be disappointed.—F. L. Akers, Dunns, W. Va.

Bottle Cured Seven

Dear Sirs:—Enclosed find \$3.50 for one bottle Spavin and Ringbone Paste, a bottle of Veterinary Healing Oil, and a package of Tonic Heave Remedy. I cured six Spavins and one Ringbone with the bottle of Paste that I ordered before.—F. B. Herlan, Gardenville, N. Y.

Offered for \$20; Worth \$500.

Dear Sirs:—I had a package of your Spavin and Ringbone Paste two years ago. I still have the little mare that I treated with it. She is eight years old and there is no horse around here that can beat her. Before I got your remedy I told my neighbors I would sell her for \$20, but now I would not take \$500 for her.—Richard Higgins, Millbrook, Mass.

Cured Twelve Ringbones

Gentlemen:—I have cured twelve cases of Ringbone with your Spavin and Ringbone Paste and have not failed on any horse that I treated.

I have cured horses that the veterinarians had failed to do any good.—H. Jackson, Lancaster, Mo., R. No. 5.

Still Sound at 28

Gentlemen:—Enclosed find money order for two dollars in payment for a package of Spavin and Ringbone Paste. I wish to say that I know from experience that it is all right. I cured a mare seven years ago with it. She is twenty-eight years old now and has had no return of her old trouble, but has been worked and driven on the road ever since.—W. F. Krukow, Hampton, Iowa, R. No. 4.

Was Entirely Worthless

Dear Sirs:—Some years ago I used your Spavin and Ringbone Paste on an old case of Ringbone or Sidebone. It effected a complete cure, although the horse had been entirely worthless for a year or more. I was about ready to give him away before I used your remedy, but after using it I worked him several years, then sold him for \$80. The man who bought him was afterwards offered \$100.—Wm. B. Hardcastle, Bowling Green, Ky.

Good as Ever

Gentlemen:—I have a \$200 mare that had a sidebone on which I used your Spavin and Ringbone Paste. She is now entirely cured and as good as ever. Many thanks to you. Enclosed find one dollar for a package of Tonic Heave Remedy.—H. Thiessen, Vice-President Milwaukie Telephone Company, Milwaukie, Oregon.

One Bottle Cured Six

Gentlemen:—Find enclosed two dollars, for which send me another bottle of Spavin and Ringbone Paste. Having cured six cases with the last bottle I feel very much pleased with the remedy.—C. W. Rumsey, Livery and Sales Stables, Saginaw, Mich.

Cured Nine

Gentlemen:—I bought two packages of your Spavin and Ringbone Paste. Have cured nine horses and have nearly a whole package left. I can surely recommend this remedy.—James Hayhurst, Robinson's Mills, W. Va.

Firing Failed

Dear Sirs:—Your Spavin and Ringbone Paste gave good satisfaction. It cured my mare and she had been lame for two years before I used it. She had been treated by firing and it did no good, but now she is well and all right.—G. R. Adams, Monitor, Ky., R. No. 1.

Lame Five Years

Dear Sirs:—My horse had been lame for five years when I applied your Spavin and Ringbone Paste, which was three years ago last December, and she has not been lame since. I think a great deal of the remedy. Would like a copy of your Vest-Pocket Veterinary Adviser.—W. L. Cliff, Hunter's Creek, Mich.

Doctor Says It's All Right

Dear Sirs:—Please send me one bottle of your Spavin and Ringbone Paste. I have used a number of bottles and it is all right. Send it soon.—Dr. A. Daniels, Saline, Mich.

Three Horses Worth Nothing

Dear Sirs:—I have used your Spavin and Ringbone Paste on three horses that were of no value at all, and they are now as sound as ever. Find two dollars enclosed, for which please send me your Fistula and Poll Evil Cure.—J. H. Shain, Sprague, Wash.

The Doctor Mistaken

Gentlemen:—I cured a Ringbone with your Spavin and Ringbone Paste after a doctor who had been treating her said she could not be cured. This was two years ago and there has

been no return of the lameness.—Henry D. Ayre, Cleveland, Tenn., R. No. 5, Box No. 60.

A Guarantee That Wasn't Good

Sirs:—A few years ago I had a horse with a bad Bone Spavin. I gave a veterinarian five dollars with the understanding that if his treatment did not effect a cure he would refund the money. When I found that it did no good, Mr. Veterinary had left this part of the country. I will say that very much to my surprise Fleming's Spavin and Ringbone Paste effected a complete cure, and I used less than one package.—Walter Eggleston, Postmaster, Millerton, N. Y.

Good for Forty Miles a Day

Gentlemen:—Four years ago I cured my mare with your Spavin and Ringbone Paste after she had been fired and all the Spavin remedies I could hear of had been used. At that time I saw your advertisement, and though I had lost hope of a cure I decided to try your remedy on your guarantee. I used the Paste on February 1, 1906, and on April 1 I began driving her five days out of nearly every week. Some trips I cover thirty to forty miles a day, and she is always ready to start again the next morning. This can be verified by nearly every citizen and farmer in this county.—Smith Johnson, Martinsville, Ind.

Two Years Wasted

Dear Sirs:—I sent to you for your Spavin and Ringbone Paste and cured a mare that I have. I cannot say enough in its praise. I had tried firing and everything people told me, and finally tried your Paste. I had been trying to cure her for two years, but it was only a waste of time until I used your remedy.—J. A. Brownell, Mexico, N. Y., R. No. 3.

Eight-Year-Old Ringbone

Gentlemen:—I used your Spavin and Ringbone Paste on a Ringbone and cured it by putting it on only a single time. The Ringbone was eight years old.—Andrew Regeth, Arcadia, Wis., R. No. 3.

(Continued from page 14.)

during winter. The clover hay should be cut up fine in a cutting box mixed with a little corn meal or bran moistened. If your birds are pulling out their feathers or eating their eggs or doing other strange stunts, feed them green food for a week or two and see the change for the better.

A Seeding Test

Small seeds are often sown far too deeply, and they, therefore, fail to give a stand of plants. A few years ago experiments were undertaken in Wisconsin in sowing clover seeds at different depths, the experiments being so extensive that about 45,000 seeds were used.

It was found that shallow planting, between one-eighth and three-quarters inch deep, was most favorable to rapid germination; planting between one-quarter and three-quarter inch produced the highest percentage of germination in a majority of cases; when the seeds were covered with one inch of compacted soil less than one-half of them germinated; and when covered with two inches of compacted soil less than one-fifth germinated.

Many garden seeds are smaller than clover seeds and will stand even less covering.

Preventing Joint Ill

The very fatal disease of young foals known as joint ill is caused by germ infection of the navel cord occurring soon after birth. It is easily prevented by use of antiseptics. Four ounces of soft water to which is added a teaspoonful of carbolic acid makes a good antiseptic lotion for the purpose. Wash the navel with it once daily until it dries up. Another treatment, excellent except for the fact that it

(Continued on page 22.)

Fleming's Spavin Cure (Liquid)

This remedy is in liquid form, but it is not a liniment. If used like a liniment, you would be using too much. The directions will make that plain.

Fleming's Spavin Cure (Liquid) is used upon all blemishes except such as we advise treating with the Spavin and Ringbone Paste. In order that you may more clearly understand what to use it for and what to expect it to do, we will give brief mention to the principal kinds of cases for which it affords a suitable treatment.

Bog Spavin:—If the horse is lame or shows signs of weakness in the part, treat the case, using Fleming's Spavin Cure (Liquid). It will cure the lameness and nearly always take away the enlargement. If there is no lameness the bunch is apt to be obstinate, and its removal more doubtful than in cases where lameness is present. We think that treatment is successful in only about 75 per cent. of such cases, so unless the bunch seems to be increasing we do not urge attempting to remove it, and specially if the horse is of the large-boned type.

Bog Spavins and similar puffy enlargements sometimes appear upon the hocks of young colts. Usually in these cases there is no lameness and we advise letting them alone, as they will in most instances disappear of their own accord where the animal is under two years old.

Some confuse Bog Spavin and Blood Spavin. Blood Spavin is merely a dilation of the vein crossing the part. It is both harmless and incurable.

Thoroughpin:—This is practically the same in character as Bog Spavin, but differently situated. What is said in reference to treating Bog Spavin applies to Thoroughpin also.

Capped Hock:—A few treatments with Fleming's Spavin Cure (Liquid) will remove this blemish completely, unless the case is unreasonably old. If it has been there a year or more and is causing no trouble, let it alone.

Splint:—Treat all recent cases with Fleming's Spavin Cure (Liquid), whether causing lameness or not. This will remove them entirely. Of the old cases, six months or over, treat only those causing lameness, for with time the bunch hardens down and cannot be removed.

Curb:—What is said about Splint applies in a general way to Curb. Treat all the new cases, and all the old ones that are giving trouble.

Wind Galls:—These blemishes are nearly always harmless. They can often be removed, but treating for this result is uncertain, so we do not urge it. If they cause lameness, treat them, using Fleming's Spavin Cure (Liquid).

Callous Bunches:—Fleming's Spavin Cure (Liquid) is the surest remedy you can use to reduce blemishes resulting from wire cuts, kicks and other injuries. It is usually effective in such cases.

Stifle Lameness:—Allow rest and use Fleming's Spavin Cure (Liquid) on a small spot over the affected part, repeating on different spots at intervals of ten days or two weeks. The remedy has been very successful in cases of this kind.

Recent Bone Spavin:—If you catch a Bone or "Jack" Spavin in the very beginning, and especially if the animal is young, you can cure the lameness permanently and nearly always take the bunch away smooth and clean with Fleming's Spavin Cure (Liquid), and this without leaving a mark or scar. But notice that we

The best Colic
protection is
Fleming's Colic Cure.

The reputation back
of Fleming's Remedies
doesn't cost you anything
extra, but it is worth
considering. Take the
Lump Jaw Cure, for
instance; it probably has
a ten times larger sale
than all other remedies
of the kind put together.

It takes actual merit to make such a thing successful, and Fleming's Lump Jaw Cure is the one big success in its line. It was first put out years ago, when most people thought Lump Jaw incurable. It soon proved its worth, and the demand has increased steadily each year since. Other things of the kind have come and gone, but Fleming's stays. It stays because it does the work, and people know that they can rely on it. The same reputation is back of all of Fleming's Remedies,—and not only that, but they are all guaranteed in a way that actually means something.

say RECENT cases—we do not claim that it will produce such results where the blemish has become well established. It does frequently cure the lameness in the older cases, and if you happen to have the remedy on hand it is well to give it a trial. But if you are ordering a remedy to treat Bone Spavin that has been observed for six months or so and is causing marked lameness, get Fleming's Spavin and Ringbone Paste. Let Bone Spavin alone altogether if there are no signs of lameness.

Recent Ringbone:—Where Ringbone is just beginning to lame a young horse, use Fleming's Spavin Cure (Liquid), especially if you wish to avoid a scar. The bunch cannot be reduced except in a few of the most recent cases. Where the case is somewhat advanced the Spavin and Ringbone Paste will be required, but do not treat with this remedy unless there is marked lameness.

Recent Sidebone:—What we have said about Ringbone will apply to Sidebone also, which is much the same and requires the same treatment.

Fleming's Spavin Cure (Liquid) does not scar the horse. It blisters, but the hair grows in again when the part is healed.

We guarantee it to the extent of the claims we make for it, and refund the money if it fails. It has a number of uses not mentioned above, but explained in Fleming's Vest-Pocket Veterinary Adviser. We refer you to this book for illustrations and descriptions of different kinds of blemishes and forms of lameness.

Per bottle, \$2. See assortment offer on Inside of back cover.

Mailed prepaid on receipt of amount.

Had to Help Her Up

Gentlemen:—I can recommend your Spavin Cure (Liquid) as one of the best remedies I ever saw. I had tried everything, and the veterinarian could not cure my mare. She is now sound and well and works in a three-horse team. She had the worst case of Bog Spavin I ever saw, and my neighbors said she could never be cured. I had to help her up during the time that she was so lame. Now I can mount her and short lope away on her like a pony. I can give you the names of my neighbors who saw her when she was good for nothing, and now know her to be sound and well. That two-dollar bottle saved me at least \$100.—James H. Savage, Greenville, Ill., R. No. 3.

Increased Value Ten Fold

Dear Sirs:—The Spavin Cure (Liquid) received and I have used it on the mule that I wrote you about. I will say that this was one of the worst cases of lameness I have ever seen. It was similar to what you describe as Inflammation of the Hock Joint in your Veterinary Adviser. I treated as you direct, and the mule is today worth \$250, the price that I paid for her. Only a month ago I would have taken \$25 for her. Enclosed find one dollar for a bottle of Sweeny Cure.—W. A. Bennett, Railroad Contractor, Chuckey, Tenn.

The Doctor Mistaken

Gentlemen:—About five or six years ago I purchased from you a bottle of Spavin Cure (Liquid) for a mare that a veterinarian had said would be useless inside of a year. I used the remedy and the mare is as sound as any today.—Poat Bros., Bulb Growers, Richmond, Va.

Sprained Tendon

Gentlemen:—One year ago this month you sent me a bottle of Spavin Cure (Liquid). I used it on a mare that was almost past use with sprained tendon, and it brought her out

all right in a short time. This is my testimony.—W. S. Liber, Lisbon, O., R. No. 7.

Cured a Big Bog

Gentlemen:—I wish to say that the Spavin Cure (Liquid) I bought of you has done all that you claim for it. I removed a Bog Spavin of large size from one of my horse's legs with only two applications.—A. G. Crutchmer, Mgr. The A. G. Crutchmer Co., Okmulgee, Okla.

Thought We Had "Done Him"

Gentlemen:—Some time ago I sent you two dollars for one bottle of your Spavin Cure (Liquid). In due season I received it, and after opening the case I was very much perturbed and felt like kicking myself for being, as I thought, "done again." If the bottle had been three times as big I probably would not have felt as I did. My three-year-old colt had two Curbs and was very lame. I read the directions and acted accordingly. Say, do you know I would not take \$25 for that little bottle and its contents. I have enough left to cure all the horses in this community.—Charles W. Cassell, Limerick, N. Y., R. No. 1.

Colt Was Worthless

Dear Sirs:—We received your almanac and it is the nicest we ever saw, but we got something from your Spavin Cure last spring that we appreciate more than anything else, and that was a perfect cure of a two-year-old colt that was worthless then, but is sound and well now. I take pleasure, though unsolicited, in recommending your remedies.—W. P. Hunt, Pres. North Missouri Christian Union Council, Lawton, Mo.

Couldn't Walk at All

Dear Sirs:—I have used your Spavin Cure (Liquid) on a horse that had Bog Spavin for two years so bad that he could not walk at all, and people advised me to shoot him. A friend told me of your Spavin Cure and I just used two applications and the horse has never been lame since.—C. G. Johnson, Central City, Nebr., R. No. 1, Box No. 8.

Couldn't Tell Which Horse

Gentlemen:—The Spavin Cure (Liquid) worked fine for me on a horse that had two Bone Spavins that had come on recently. Some of my neighbors were saying that Bone Spavin could not be cured. I said that it could. I have twelve head of horses, and to prove my statement I offered five dollars if they could pick out the horse that I had cured the Spavins on with your remedy.—J. S. Christy, Candee, Minn.

Cured Them All

Dear Sirs:—I have used your Spavin Cure (Liquid) on one case of Sidebone, two Bog Spavins, and a Splint, and have cured them all well and sound.—E. V. Bailey, Benson, La.

Offered for Chicken Feed

Gentlemen:—I will tell you what your Spavin Cure (Liquid) did for me. I have a mare that I offered to sell for five dollars for chicken feed. That was three years ago. I used your remedy and would not sell her now for \$100.—George Wood, Somersville, Conn.

Injured Stifle

Gentlemen:—I have used your Spavin Cure (Liquid) with good results. My brother-in-law had a mare worth \$250. She was kicked on the stifle joint and there formed a knot. I let him have some of the Spavin Cure, and it took the knot off so smooth that you could not tell where she was kicked.—Joseph E. Bowling, Maxwelton, W. Va.

Cured Various Troubles

Gentlemen:—I sent to you last year for a bottle of Spavin Cure (Liquid) to use on a case

We will mention again that you ought to have a bottle of Fleming's Colic Cure. We do not think there is anything else that can protect you so fully against Colic loss, and surely the danger is sufficient to justify you in investing a single dollar as a precaution against it. Every year thousands of horses die just because their owners haven't Fleming's Colic Cure.

On many farms every horse is needed during the summer season. Some of them may be lame from Bone Spavin, Ringbone, etc., but not too lame to be of use, and it has been impossible to lay them off for treatment. It is not practicable to attempt to cure a Bone Spavin or Ringbone and work the horse at the same time. One should be prepared to allow complete rest, and as much of it as may be needed. Usually about six weeks' rest is required to properly treat a case with Fleming's Spavin and Ringbone Paste. Team work on most farms will soon ease up now, so that the lame horses may be given attention, and there is no better time of the year for treating such cases.

of Bog Spavin on a fine mule. It cured him in a few weeks, and I sold him for \$200. I then sold a part of the medicine for one dollar. Later a fine horse got cut on his knee and it left a large bunch at the bottom of the cut, which injured his sale. I applied the Spavin Cure and the knot soon went away, and I sold him and his mate for \$400. A little later a mule got very lame and had to hop from a Splint, then he took the Sweeny in that shoulder. I applied the same remedy to the Splint twice and rubbed the Sweeny with my fist or knuckles, and he got well in a short time. I was offered \$160 for the mule. If I can help you in the sale of your remedies I will gladly do so, knowing that it will help the other fellows most.—B. G. Hurst, Clyde, Texas, R. No. 1.

Good Medicine

Gentlemen:—You certainly make good medicine. Several years ago I sent to you for medicine to cure a Capped Hock. Well, I had it on hand a month before I could get a chance to use it, and the horse getting worse every day. Finally one day I said to a new hired man, "You know that horse that limps so?" "Yes," he says, "Well, here is some medicine. Give him an application." And that was the last he got, and the next time I saw the horse he was all O. K. This summer he (the horse) got to limping again, and I called a veterinarian and he said he had a cracked hoof. He gave me some oil to use, so when I went to oil his hoof no sooner than I cast my eye down I saw what the trouble was. There was a knot as large as my thumb just above the hoof, and it was awfully sore when I touched it. I asked my wife for the Fleming Cure, and sure enough we found it. One application was all that he got, and he has been well this long time. I guess we have enough of that medicine to cure our horses for ten years. Please send me your Veterinary Adviser.—W. S. Cavender, Dealer in Farm Implements, Willard, Ill.

Shoe Boil

Gentlemen:—I used your Spavin Cure (Liquid) on two of my horses. Both had Shoe Boils and they disappeared in a short time, and I have seen no sign of their returning. Your remedies have done all that you claim for them as far as I have used them.—E. F. Oehrle, Somerset, Mass., Box No. 27.

(Continued from page 18.)

is poisonous and would likely make the mare's mouth sore if she should lick the navel, is to dust the part well with the following mixture: Finely powdered resin, four ounces; finely powdered bichloride of mercury, half an ounce.

Buttermilk Ice Cream

If you are fond of buttermilk you will certainly like buttermilk ice cream, and after eating it several times you will consider the sweet kind flat and tasteless. The buttermilk is sweetened with sugar and flavored with vanilla or other desirable flavoring as in the making of any ice cream, and frozen. The buttermilk must be fresh and of a mild acid, and if there is too much acid you can use some sweet skim milk to modify it to your taste. If you like rich cream put as much sweet cream in as you wish before freezing. But plain fresh buttermilk sweetened and flavored with four fresh raw eggs, well-beaten, added to the gallon makes a most wholesome and delicious ice cream.

Cultivating Strawberries

Strawberries should be set in rows 20 to 24 inches apart in the row and the rows 2½ to 4 feet apart. Cultivate between the rows with a one-horse cultivator, always going the same way. As soon as the runners start they should be trained in the rows and cultivation will do this very largely. By cultivating always the same way the runners will be dragged length-

(Continued on page 26.)

Fleming's Tonic Heave Remedy

If you have a horse that needs something in the way of a tonic and blood purifier, give him Fleming's Tonic Heave Remedy.

That may seem odd, considering that he hasn't the Heaves, but the explanation is that the only reason it cures Heaves is because it is so good a tonic.

It is pretty generally conceded that Heaves proper is not a disease of the lungs, but rather a reflex nervous disorder, usually arising from digestive derangement. This explains why overfeeding, drinking too copiously of cold water, etc., so often tends to aggravate the heaving.

Broadly speaking, a tonic is a remedy that tends to correct trouble wherever it exists. This is done by gradually and permanently improving digestion and assimilation, and imparting strength and tone to the whole system. It is clearly seen, therefore, why a tonic remedy is the correct remedy for Heaves.

It would be wrong to say that all cases of Heaves are curable. We offer this remedy, not as a certain cure, but as the best we are able to supply, and, as we believe, the best remedy for Heaves that has ever been prepared.

Cases vary. Some are more easily cured than others, regardless of how bad they seem to be or how long they have existed. The usual quantity required is one to three packages. Even if no improvement is seen from the first package, it is advisable to use a second, as our experience shows that many cases are slow to yield at first, but come out all right in the end. It is not to be supposed that we guarantee one package to be enough, or that we will send extra packages on trial. Where a mare having Heaves is in foal, the remedy is not apt to benefit as it otherwise would, and we advise deferring treatment until after foaling time.

Do not use Fleming's Tonic Heave Remedy with a view to quickly and temporarily suppressing the symptoms in order to make a trade. It acts slowly and is calculated to cure rather than produce apparent cures.

The percentage of cases that will not yield to proper treatment with this remedy is comparatively small, and even those that are not cured are usually so far relieved that the animal is able to work in comfort, so that the benefit derived is worth more than the money expended. If, however any one is not satisfied with the results, we will refund the price he paid.

For more complete information upon Heaves, and also other respiratory affections, see Fleming's Vest-Pocket Veterinary Adviser.

Good for Many Ailments

Being an excellent general tonic and blood purifier for horses, Fleming's Tonic Heave

Remedy is remarkably good for a variety of disorders, such as thin flesh, hide-bound, rough coat, general weakness, indigestion, catarrhal troubles, chronic coughs, blood derangement, skin disease, etc. For putting run-down horses in condition, or to tone up the system at shedding time in the spring, we do not think anything can equal it. It is easily given, any horse will take it readily, and it is economical to use for these purposes because a package goes so far.

Per package, \$1. See assortment offer on inside of back cover.

Mailed prepaid on receipt of amount.

Box Worth \$100

Gentlemen:—Upon my recommendation Mr. W. H. Forder, of this place, sent for your Tonic Heave Remedy, and he is very enthusiastic over the results he has obtained from its use. He has a horse that was so badly afflicted with Heaves that he decided to kill him to end his suffering. He had tried numerous remedies with the result that the horse kept constantly getting worse. This sounds like fiction, but Mr. Forder has told me more than once that the first box of your Tonic Heave Remedy was worth \$100 to him. The horse began to improve at once, and although he has not used more than two boxes he says the horse never felt so well before. He drives him long and hard and no signs of the Heaves are apparent. Mr. Forder says your Tonic Heave Remedy is great stuff. Mr. William Doyle also uses your remedy and is much pleased with it. I shall be pleased if you will send me two or three copies of your Veterinary Adviser to give to some of my friends. In behalf of suffering horses I wish you success.—J. F. Fleischer, Buhl, Minn.

Could Hardly Stand Up

Gentlemen:—Enclosed find two dollars to pay for two boxes of your Tonic Heave Remedy, as it is the best thing for run-down horses that I ever tried. I have used it for several years in my stable. It saved a horse for me last year that was so poor he could hardly stand up. In one month he was working every day.—J. S. Downs, Livery, Feed and Sale Stable, Taylorsville, Ky.

Couldn't Pull Empty Wagon

Dear Sirs:—Your Tonic Heave Remedy has done my horse so much good that I do not know how to thank you. I just wish you could have seen him when I wrote to you for the medicine. At that time he couldn't pull an empty wagon, but now he is all right for work. I shall recommend your Heave Remedy to everybody who has use for anything of the kind.—Virgil W. Jones, Weems, Va.

Gained Fifty Pounds in Ten Days

Gentlemen:—The Tonic Heave Remedy was just what I needed. It worked fine. I think one of my mares has gained fifty pounds in the last ten days.—F. E. Hill, Grawn, Mich., R. No. 1.

Not Able to Work

Gentlemen:—I used your Tonic Heave Remedy on a horse that was so bad that she was no good at all for work, and she is all right now. I got the remedy from my neighbor. It certainly is fine for Heaves.—Orin Miller, Millston, Wisconsin.

Completely Cured

Gentlemen:—Enclosed find one dollar for a package of your Tonic Heave Remedy. I had been told by a friend that some time ago he had a draft horse that showed Heaves quite bad, and he thought he would not be able to

work him any longer. He procured some of your remedy and it completely cured the horse, and today he is free from any signs of Heaves.—W. H. Lasher, Germantown, N. Y.

Gets More Work

Dear Sirs:—Kindly send me one box of Tonic Heave Remedy for the dollar enclosed. The last box did so much good for our horses that we wish to give it to them every spring now, as we find that we can get more work out of them and they do not get so poor.—Al Henry, Loyalton, S. D.

Worth \$100 More

Gentlemen:—The last two boxes of Tonic Heave Remedy that I got, cured a horse for my neighbor that was not worth over fifty dollars, and now he says he would not take \$150.—B. V. Powell, Greentown, Ind., R. No. 3.

Better Than Condition Powder

Gentlemen:—I can say that your Tonic Heave Remedy did what you claimed it would do. I would not give one box of it for ten pounds of any condition powder that I ever saw.—Everett Townsend, Nelson, Mo.

Cured Bad Cough

Dear Sirs:—I ordered a list of goods from you some time ago and received them O. K., and have found them to do all that you claim. I had a horse with an awful roaring cough, but your Tonic Heave Remedy checked it right away. One of my neighbors had a mare coming on with the Heaves pretty lively, and I gave him a box of it. He did not give her all of the package, as he had some other ones that needed it, but he claims that he has not heard her cough once in three or four days, so he wants another box. Please send me two boxes of the Tonic Heave Remedy and one bottle of Colic Cure. Find enclosed money order for three dollars.—Fred W. Meiss, Hoopeston, Ill.

Doesn't Heave a Bit

Dear Sirs:—My mare that had the Heaves is well and fat, and she doesn't heave a bit. I thank you for what your Tonic Heave Remedy has done.—James M. Steel, Bradyville, Tenn.

Doctor Suggested Cold Lead

Gentlemen:—I must tell you how grateful I am to you for your Tonic Heave Remedy. One box cured my buggy horse of Heaves after the veterinarian had told me that the only cure he would ever get would be a dose of cold lead. He was so poor he could hardly move around. I followed directions and used just one box and he is fat and travels as well as ever without any coughing or discomfort of any kind. I have also used your Lump Jaw Cure a great deal and must say that it is the only cure for that disease.—Mrs. Ed Heightsmenn, New Plymouth, Idaho, R. No. 1, Box No. 27 A.

Had Heaves Seven Years

Dear Sirs:—I am more than pleased with what your Tonic Heave Remedy has done. I have an old horse twenty-one years old that has had the Heaves for about seven years. I could not have worked him this summer at all if I had not used your Heave Remedy. He is working right along and looks fine.—James F. Cullen, Platteville, Wis., R. No. 9.

One Box Cured

Gentlemen:—I cannot praise your remedies highly enough, and you may be sure I will recommend them wherever I can. I had a mare with the Heaves and gave her one box of the Tonic Heave Remedy, and she was cured. I also had a mare with a very bad case of Poll Evil. One of the very best veterinarians in St. Paul said that an operation would be needed, but I sent for a bottle of your Fistula and Poll Evil Cure, and with three applications she was as well as ever.—Frank Egan, Newport, Minn.

Do you make it a practice to keep
veterinary remedies on hand? There is
one at least that you ought never to be
without, and that is Fleming's Colic Cure.
It is a wonder in the work it does. Costs
but a dollar, and there's no saying when
it may save your best horse.

One time we received
a testimonial as follows:
"I bought a package
of your Spavin and
Ringbone Paste and
used it on a worthless
mule, and now he is
worth at least five times
what he was worth be-
fore I used it."—Some-

thing of a joke if taken literally, but not a bad testimonial if taken as it was intended. In reality,
it means that a mule of no value, one that could not earn the straw upon which he slept, was con-
verted into a good serviceable farm animal, capable of doing his day's work and turning a profit into
the pocket of his owner. Fleming's Remedies have made just that kind of a change in thousands of
worthless animals. If you have one, horse or mule, lame or worthless in some other way, look up
his case in Fleming's Vest-Pocket Veterinary Adviser. If you haven't a copy we will mail you one
free upon request.

Cured Effects of Distemper

Gentlemen:—I used one box of your Tonic Heave Remedy on a valuable mule that I own. The mule was suffering greatly from shortness of breath, the result of Distemper, and one box of your valuable remedy did the work, and completely restored the mule to good health. It affords me pleasure to recommend your remedy to my friends, and it always does the needful.—Claiborne S. Bowman, Durant, Miss., R. No. 1.

Keeps Him Able to Work

Gentlemen:—One year ago I found that one of my horses had the Heaves pretty bad, so bad that I had to quit using him. I got three dollars' worth of your Tonic Heave Remedy and in the spring I could not see that the horse had the Heaves at all. This fall I have noticed some symptoms again, and that is the reason I send for more of the Heave Remedy. I do not think it will cure the horse entirely, but it will keep the disease under control so that I can work him. I have also used your Lump Jaw Cure and Spavin and Ringbone Paste successfully.—John O. Fjarli, Berwick, N. D.

Wanted the Scavenger

Gentlemen:—Enclosed find one dollar. Please send me another package of your Tonic Heave Remedy. Our old horse has done fine this summer, and I think she had better have some more as fall comes on and pasture gets short. When she had such a spell in the spring she got down in town and when my husband brought her home he turned her in the barn lot. He said she would never be able to work again and wanted to send for the scavenger to come and get her. I begged for her, and began feeding the Tonic Heave Remedy. Her hide loosened up and she picked up flesh real fast and has been strong and well all summer. This is a medicine hard to beat.—Mrs. H. Beadles, R. No. 4, Decatur, Ill.

(Continued from page 22.)

wise of the rows. Do not cut off the runners but allow them to grow. At the end of the season matted rows will have been formed some 16 to 20 inches wide. Apply a good thick mulch late in the fall when the ground is solidly frozen.

Time to Cut Fodder Corn

The amount of dry matter in the corn field increases at almost a regular rate from the time of tasseling until ripe. In round numbers it is as follows: when in silk it has twice as much dry matter as when in tassel, when in milk three times, and when ripe five times as much as when in tassel. The digestible matter also increases as the corn matures so that the increase in dry matter is even less than the increase in digestible matter per acre. With these facts in mind one cannot be left in doubt as to the importance of allowing corn to come as near ripe as possible before it is cut for fodder. It should not be left, however, after it is ripe for the leaves to be broken off by the wind and the digestible matter bleached out by rain and dews. The common mistake, however, is for the grower to cut it too early.

To Prevent Colts Choking

There is always danger that a colt will become entangled in the halter rope and strangle to death where it is necessary to keep the mare tied in the stall. Hundreds of such accidents have occurred. A good way to prevent it is to take a piece of old garden hose and string the halter rope through it. Let the hose be about two-thirds the length of the rope. After placing it on the rope tie a knot below it so that it will not come off every time the rope is untied from the manger. This will prevent short kinks and make it impossible for the colt to become entangled.

(Continued on page 29.)

Fleming's Colic Cure

If you have a horse, you should have a bottle of Fleming's Colic Cure as a matter of safety.

We know of nothing else that can afford the same degree of protection against Colic loss.

It may be that you have owned horses for years, and not one of them ever had an attack of Colic, but that is no assurance of safety—you may lose your best horse tomorrow.

Colic kills more horses than any other one thing. It is the most common and prevalent ailment that horses have, and every attack is dangerous. It comes without warning and kills quickly, and every horse owner should be prepared to treat it without an hour's delay.

A few cases will prove fatal, regardless of anything that can be done, but they are very few, and the great danger is in being unprepared for such an emergency.

If Fleming's Colic Cure were kept on hand by all who really ought to have it, we predict that the annual Colic loss would be no more than five per cent of the present magnitude.

It is a remedy that is capable of saving millions of dollars every year to the farmers of the country, and there are just two reasons why it is not saving all that it might save—some do not know about it, and some who do know neglect to avail themselves of its protection.

But more and more are realizing that it is worth while to order this remedy, even though no need for it is in sight at the time. The increase of sales tells us that. But more of it should be sold—it is good enough to deserve a sale of a million bottles annually.

We consider that what is said in this almanac about Fleming's Colic Cure, can be of most importance to the largest number of people, because it is of importance to every man who owns a horse, and we hope, therefore, that all will read the letters that follow, for they make it plain what this remedy can do in the way of saving horses.

Fleming's Colic Cure will retain its properties for years if the bottle is kept tightly corked. It is easily given and each bottle contains eight doses. One dose cures most cases, but a few will require two or three. Full directions and a description of the symptoms of the various forms of Colic accompany each bottle.

Include Fleming's Colic Cure when making up an order. Even if you never need it, the satisfaction of having it will be worth more than its cost.

Mailed prepaid for \$1.

See assortment offer on inside of back cover.

Wonderful

Dear Sirs:—I have used your remedies for the past ten years with good results, but I want to say that your Colic Cure is the most wonderful remedy that I have ever known. I bought a six-year-old driving horse about ten days ago.

He was run down in flesh, but was hearty and had a good appetite. I began feeding him well, but he could not stand for it, and the result was a case of spasmodic colic. I had been at a neighboring fair, and got home about eight o'clock in the evening. My wife informed me that I had a sick horse in the barn, and that he had been sick since four o'clock. She said the men had given him all the colic cure on hand, but he was no better. I went to the barn and at once saw that I had a very sick horse. I called a veterinarian, and he arrived about midnight. He treated him as well as he could and left medicine to be given every hour. We cared for him until five o'clock in the morning, then he got so bad every one said he would die. I concluded to look over my stock of medicines, and was astonished to find that the men had given him colic cure, but not Fleming's Colic Cure. It really seemed no use to give the horse anything more, as he had passed the second stage of the fatal disease, and all the men expressed it as their opinion that he could not recover. I told them that we would give him a dose anyway, and we did so at 5:40. The horse at this time was so weak that he could scarcely stand on his feet. Think of our surprise when at seven o'clock, an hour and twenty minutes after giving him the dose of Fleming's Colic Cure, he began eating hay. My wife is driving him today and he is as well as ever. I have never lost a horse with colic since I have used your Colic Cure, but I think the case I just described is well worth special mention. That a horse, after suffering twelve hours with colic, all other medicines and the doctor's treatment having failed to give relief, and the animal having been given up to die, should be restored to health in less than an hour and a half, and with only one teaspoonful of Fleming's Colic Cure, is wonderful. If this letter can be of assistance in making known the great value of your wonderful remedy, you have full privilege to make use of it in that way.—P. A. Buchman, Dealer in Horses, Frank, Ohio.

One Dose Worth \$300

Dear Sirs:—Use of your Colic Cure saved the life of one of my horses this morning, and I want to get the remedy in stock. I may never have further use for it myself, but still I may, and besides I want to handle it in order that it may help my customers. My horse was given up to die, and one dose of the medicine saved him. I value him at \$300, and I will say that the one dose of your Colic Cure was worth \$300 to me. Please let me hear from you by return mail and give me your price on two dozen bottles.—C. W. Aikins, General Merchandise, Statesboro, Ga.

Saved Two

Dear Sirs:—I have had two serious cases of Colic since I ordered your Colic Cure. It simply saved a young horse for me that I was offered \$250 for. I found her one morning down and rolling with such a case of Colic as was killing horses fast for people in my community. I gave her one dose and she has been well ever since. I then had a mule taken with Spasmodic Colic Sunday night, Sept. 5, and he was in hard shape when I found him. I gave him one dose and it helped him considerably. About half an hour later I gave him the second dose and he began to eat grass, and is now doing fine. I consider that the remedy saved both of these animals, and I cannot find words to congratulate you for its great and wonderful good. I wish every owner of horses and mules knew its merit, and if they did they would always keep it.—Forrest Scott, Franklin, Texas.

Saved a Thousand Dollar Mare

Dear Sirs:—Find enclosed three dollars for a bottle of Spavin and Ringbone Paste and also a bottle of Colic Cure. Your Colic Cure has never failed for me yet, although some cases have required a second dose. I had a \$1,000 mare to have the Spasmodic Colic, and we thought sure she was going to die, but two doses cured her. I wouldn't be without the

remedy. I can take your Veterinary Adviser and your remedies and cure almost anything.—John W. Waddill, Breeder of Percherons, Belgians, and Coach Horses. Brashear, Mo., R. No. 1.

Veterinarian Gave Up

Dear Sirs:—About a year ago I sent to you for a bottle of your Colic Cure. I cured three cases for myself from the bottle this spring. One of my neighbors had a mare with such a bad case of Colic that the veterinarian had given her up. He said that he had done all that he could do to save her. The neighbor sent to me to know if I had anything for Colic, as he had heard of my curing my own cases. I took my little bottle and went over and gave the mare one teaspoonful in a pint of milk, and in less than half an hour the mare was on her feet. At the expiration of forty minutes I repeated the dose, and in less than one hour from the time I gave the first dose she was eating and has not missed a feed since, and that was over six months ago. I have also used your Eye Lotion with the best results. I think your veterinary preparations are a whole veterinary hospital in a nutshell.—Wm. H. Wisham, R. No. 1, Denton, Md.

Feels Safe When He Has It

Gentlemen:—Find enclosed one dollar for a bottle of Colic Cure. I purchased a five-dollar lot of your remedies last spring, and found them all right. Have had several cases of Colic, and one dose of the Colic Cure was all that was ever needed to cure the horse. I always feel safe when I have it in the barn. I worked twenty-six head, and have had a number of cases of Colic, but have cured them all.—Robt. Hamilton, Palouse, Wash.

Saved \$200 Mare

Gentlemen:—I am writing to tell you that I received the bottle of Colic Cure that you recently sent. I haven't had any use for it this summer, but I wouldn't want to be without it, as I consider that it was the means of saving a \$200 mare for me a year ago.—John Kennedy, Cul de Sac, Idaho.

Had Five Cases in One Day

Dear Sirs:—I enclose remittance for six bottles of Fleming's Colic Cure and two packages of Tonic Heave Remedy. Please send at once as I am clear out of the Colic Cure. I cannot treat Colic any more without your remedy. It cures any colic cure that I ever saw. One day last week I had five cases, and not one of them required more than two doses.—S. H. Bush, V. S., Ft. Atkinson, Iowa.

Neighbor Cured Three

Gentlemen:—My neighbor, Mr. Tippley, has cured three horses from the bottle of Colic Cure that you sent me some time ago. He has handed me a dollar to send to you, and you will find the amount enclosed. Please, mail another bottle.—F. R. Brand, Faribault, Minn., R. No. 6.

Doctor Likes It

Dear Sirs:—For the enclosed amount please send me three bottles of your Colic Cure. I am having splendid success with your remedies, and especially with the Colic Cure.—J. E. Garvin, V. S., Plainville, Kansas.

Eased in Ten Minutes

Gentlemen:—Enclosed find money order for which send me one bottle of Fleming's Colic Cure. I had a valuable filly with Colic yesterday and I tried several remedies which did no good. I went to a neighbor for help, and he said he had a bottle of Fleming's Colic Cure which was recommended to him to be very good. We gave her a dose and in ten minutes she was perfectly easy.—Clyde H. Overeen, Coffeen, Ill.

Saved Several

Dear Sirs:—I purchased a bottle of Colic Cure and find it to be finer than silk. We have saved several valuable horses with it. Have used six doses, and every dose helped the horse. I still have two doses in the bottle, but would like to have another before this is gone.—J. Diefenbach, Pearl, Ohio.

Feet in the Air

Gentlemen:—When I did my chores last night there was no sign of anything being wrong with any of my stock, but about two hours later I went to the barn and found a very sick horse. He was on his back with his feet right up in the air. I gave him a dose of the Colic Cure that I got last spring, but he seemed to get worse right along. I waited twenty minutes without any result, then made up my mind that it was a case of kill or cure, so I gave him another dose, and he was soon relieved. This morning he is all right and ready for his grain.—L. M. Churchill, Peshtigo, Wis., R. No. 1.

Saved a Fee

Gentlemen:—We enclose money order for one dollar and in return would like to have one bottle of your Colic Cure. We have kept it in the stable for several years, but have only one dose on hand at present. It saved a V. S. fee for us just a few days ago, and we do not like to be without it.—Washburn Bros., Westerville, Ohio.

Preserving Eggs with Water Glass

The method of using silicate of soda, commonly called water glass, in the preservation of eggs is as follows: Water is boiled and allowed to cool, then the water glass is added in the proportion of one gallon to each nine gallons of water. Stone jars are the best vessels to use, but very clean and well-scalded kegs or barrels will do. The eggs should be perfectly clean, but do not wash them. They must be fresh, and may be placed in the solution each day as gathered. Keep the eggs under the surface, weighting them down, if necessary. The vessels should be placed where the temperature does not rise above 65 degrees. April eggs are the best, May and June following. When using eggs, use those put down in June first, reserving those preserved in April until last, the reason being that the warmer the weather when the eggs were placed in the solution the sooner they will deteriorate. The solution cannot be used a second time.

Disinfecting Rooms

For a room containing 1500 cubic feet take ten ounces of powdered permanganate of potash, place it in an old kettle in the center of the room, tighten all doors and windows so as to prevent the fumes escaping, pour one pound of formaldehyde over the potash, then get out of the room as quickly as possible and close the door. Keep the room closed for twelve to twenty-four hours. Vermin of all kinds may be destroyed by using double the amounts given.

Short Notes on Various Subjects

That Indian Runner Ducks are entitled to consideration as egg producers is indicated by the following record, which is sworn to by a breeder of these fowls: Between January first, 1909, and January first, 1910, six ducks laid 1351 eggs, an average of 225 per duck. These ducks in their native country, India, are said to average 250 eggs each year.

The Missouri College of Agriculture has raised and developed the greatest milk producing cow on record. Missouri Chief Josephine, a Holstein-Friesian cow, finished her six months' test

(Continued on page 30.)

Fleming's Sweeny Cure

Don't neglect Sweeny. Some cases will recover without treatment, but it isn't safe to depend on that. To do so is to take a chance that the horse will never be right again.

It is almost equally bad to employ some of the severe procedures that will be recommended to you if you ask around among your neighbors.

Fleming's Sweeny Cure is prepared especially for Sweeny and Shoulder Lameness. Its use does not involve cutting, puncturing the skin, inserting rowels, or anything of the kind. You merely apply lightly upon the surface, and upon only a small surface at that, and it penetrates sufficiently. It stimulates the tissue forming processes, so that the wasting of the muscle ceases and the rebuilding begins. If the horse is not lame, he may do slow and easy work on smooth ground during his recovery.

We guarantee Fleming's Sweeny Cure—your money back if it ever fails.

Mailed prepaid for \$1.

See assortment offer on inside of back cover.

People Said Horse Was Ruined

Dear Sirs:—That Sweeny Cure I ordered last spring I used on a horse that had a very bad case of Sweeny. I applied on four different places, and gave him rest for about fifteen days, then put him back to work and he has lost but one day since. The people told me that the horse was ruined, but today he is worth \$200 of any man's money. Your medicine did the excellent work.—Jonathan Haddix, Philippi, W. Va., R. No. 2, Box No. 47.

Could Lay Hand in Cavity

Dear Sirs:—I had a three-year-old colt a year ago so badly sweenied that I could lay my hand in it. My brother had successfully used your Spavin Cure, and he advised me to send to you for the Sweeny Cure. I had not much faith, but sent for it and used about a teaspoonful. Several have looked at the horse since, and cannot tell which shoulder it was that was sweenied. The dollar that I paid for the medicine saved me more than \$100. Please, send me your Vest-Pocket Veterinary Adviser.—R. E. Cook, Gilboa, N. Y.

Cured Seven

Gentlemen:—Your Sweeny Cure is all you claim for it. I have cured seven cases, and have about half of the bottle yet.—T. S. Underwood, Roseboro, N. C.

Cheap Enough

Gentlemen:—I bought a bottle of Sweeny Cure from you and when I received it and saw the size of the bottle I thought it very costly, but I can say that it is cheap enough, for I have cured four head of horses and have enough left to cure another one. I think it a great remedy.—H. L. Hancock, Miakka, Fla.

Cured Horse and Mule

Gentlemen:—I own a horse that had Sweeny in the worst stage, and three applications of your Sweeny remedy made a complete cure. One of my neighbors had a mule that had it, and I let him have the remedy. He cured his mule and told me the other day that he has

two-thirds of the remedy yet. It cannot be beat.—George H. Howerton, R. No. 9, Vincennes, Ind.

Doctor Failed

Dear Sirs:—I am glad to tell you that my mare is all right again. The Sweeny Cure that I sent to you for last winter for shoulder lameness has fixed her up fine. All I used was one application, and I have enough left to cure a dozen more. I had tried other remedies and had a horse doctor treat it, but everything failed except your Sweeny Cure, which surely brought her through all right, and I am a thousand times obliged.—Thos. F. Lloyd, Zimmerman, Minn., R. No. 1, Box No. 16.

Would Guarantee It

Gentlemen:—Two years ago I had two horses badly sweenied, one in both shoulders. They were of three months' standing, and you could lay your hand right in the shoulder. They are now perfectly sound and can trot and run as natural as ever. I would guarantee your Sweeny Cure to any one.—Robt. M. Macauley, Bowman, N. D.

Worth Many Times the Price

Gentlemen:—I have used your Sweeny Cure and I want to say that it is all O. K. It is the best I ever saw and is worth the price paid many times over. I used it on my mule one time and it cured him sound and well.—George W. Smith, South Hill, Ky.

Couldn't Go Straight.

Dear Sirs:—I must drop you a few lines to let you know that the bottle of Sweeny Cure that I got some time back has done fine. My mare was so bad she could not go straight, but would travel sideways. I used the Sweeny Cure three times, and the lameness went in the other shoulder. Then I used it there and it all disappeared. She can go as straight as any horse now.—Charles H. Loudon, Beltsville, Md.

Lame Two Years

Dear Sirs:—I am ordering a bottle of your Colic Cure, and I hope and trust that it will do as well as your Sweeny Cure, which I received from you about two years ago. I had a large mare that had been lame for two years. I used the Sweeny Cure on her and today she is entirely free from lameness.—John Miller, Glenwood, N. Y., Box No. 76.

(Continued from page 29.)

on July 18, producing 17,008.8 pounds, an average of 93.4 pounds of milk daily for 182 days. This is equivalent to 46.7 quarts, or 11.6 gallons every day. Her highest record for one day was 110.2 pounds.

This being the cement age, cement floors are good for the new poultry house, for they are dry and easily kept clean. They can be covered with dry earth in summer and cut straw in winter.

Whitewashing with a good compound air spray pump is the cheap and effective means of cleaning up and sweetening the interior of the poultry house. Strain the wash through a fine sieve or through burlap before use in the sprayer and then it is not apt to clog the machine.

Every shiver of the cow shakes dollars out of the pocket. So why give the cow cold water.

Never feed cold milk to a young calf. It will chill the stomach, injure the digestion, and cause serious trouble from which it is hard to recover.

Properly cured silage from ripened corn is very uniform in quality, and when fed to milch

(Continued on page 31.)

Fleming's Knee-Sprung Cure

This remedy is not intended to cure the old and bad cases of Knee-Sprung. They are usually past help.

Nor do we recommend attempting to cure those occasional cases where a forward position of the knees is an hereditary deformity that has existed from colthood.

Cases due to wire cut or other severe injury that may have lacerated the tendons are doubtful, though if the animal is young and the case is not extreme, early treatment will often be successful.

We mention these things because we do not wish you to purchase this remedy for any but favorable cases: Usually Knee-Sprung is due to sprain or over-exertion, causing the back tendons to become contracted, and the best time to treat is when the knees are first observed to be weak and shaky. When the trouble has existed six months or so, or has become conspicuous, it may not be too late to effect a cure, but the result from treatment is more uncertain.

The remedy does not blister, nor does its use interfere with working the horse, though of course fast work or heavy exertion should be avoided.

The improvement is necessarily gradual, and the time required to cure varies in different cases. Sometimes a single bottle of the remedy is sufficient, but the average quantity required for recent and moderate cases is about two bottles.

We refund the money if satisfactory results are not obtained, thus giving the customer the safe side.

Per bottle, \$3. See assortment offer on inside of back cover.

Sent prepaid on receipt of amount.

Done Wonders

Gentlemen:—Enclosed find money order for another bottle of Knee Sprung Cure. I want to say that this remedy has done wonders on my horse. Send it at once, please.—F. H. Hermann, Ashley, N. D.

Worst Case He Ever Saw

Dear Sirs:—I am a blacksmith by trade and have a wide experience with horses. I have tried your Knee Sprung Cure and find it is something great. I cured a track horse of the worst case I ever saw. I learned of your remedy through a traveling steel salesman who had used it. I have also used your Colic Cure with splendid results.—C. Snyder, Marietta, Ohio, R. No. 1, Box No. 17.

Well Ever Since

Sirs:—I would like to tell you that I used your Knee Sprung Cure last fall on a driving horse. She got well and has been well ever since. She was lame and the tendons seemed weak and in bad shape.—Wm. P. McDonald, Pickford, Mich.

An Excellent Remedy

Gentlemen:—I will tell you that I have used your Knee Sprung Cure with great results. It is an excellent remedy for its purpose.—Carl M. Ralston, New Salem, Ind.

Fleming's Veterinary Eye Lotion

This remedy is for every eye ailment of animals that is marked by inflammation and soreness.

It will not restore sight in a case of blindness, nor will it improve the sight in partial blindness if the eye structure itself has been impaired by injury or disease.

For Moon Blindness of horses there is nothing better to relieve the inflammation and protect the sight, and it will often ward off the recurring attacks, though we cannot promise a complete and permanent cure of this disease. (See Moon Blindness in Fleming's Vest-Pocket Veterinary Adviser.)

For all weak, watery, swollen, sore and inflamed eyes among your stock, use Fleming's Veterinary Eye Lotion. Paying a higher price will not get you a better remedy, and we return your money if you are not satisfied.

Mailed prepaid for 50 cents.

See assortment offer on inside of back cover.

Restored to Full Value

Gentlemen:—One bottle of your Veterinary Eye Lotion cured the worst case of bruised eye that I ever saw. Before the horse was hurt I would not have taken \$500 for him. After he was hurt I would have gladly sold him for one-quarter of that amount, but the fifty cents that I paid you for the Eye Lotion brought him back to full value. I do not want to be without it. Send me two bottles.—J. C. Getchell, Manufacturer of Lumber and Mine Timber, Cambria, Wyo.

Nothing Equals It

Dear Sirs:—Enclosed find post office order for a bottle of Veterinary Eye Lotion. I have tried it and find that nothing equals it for sore eyes among animals, and I therefore heartily recommend it to all who may need anything of the kind.—L. M. Johnson, Fairview, Ky.

Saved the Eye

Dear Sirs:—I have used some of your Veterinary Eye Lotion that I got from my neighbor, Michael Esser. It has saved an eye for one of my horses, and I consider that this has been worth fifty dollars to me.—Matt Udelhafen, Cassville, Wis., R. No. 2.

Three Applications Cured

Dear Sirs:—I ordered some of your Eye Lotion some time ago and used it on a very bad eye. It worked fine and the eye was cured after three applications.—E. E. Roby, Muses Bottom, W. Va.

(Continued from page 30.)

cows will give a large flow of milk and not injure the quality.

The seams and joints in all dairy utensils should be filled with solder, for these are ideal places for the breeding of germs. The milk should not be allowed to stand in the barn any length of time. The cream from the morning and night milkings should not be mixed until both have thoroughly cooled.

Frequent watering of the teams during harvest is good insurance against sunstroke.

Fall plowing helps to destroy the grasshopper broods that otherwise would do damage another season.

Fleming's Chemical Hornstop

Just clip the hair off the horn button and stick on a little piece of Fleming's Chemical Hornstop.

It is a pasty substance and will stay where you put it.

Do this when the calf is three to ten days old and there will be no horns to saw off later.

The calf scarcely minds it at all, for it causes but little soreness.

Put up in collapsible tubes, each sufficient for twenty-five to fifty calves, but the preparation will not keep from year to year.

Money back if it doesn't stop the horns.

Mailed prepaid for 50 cents.

See assortment offer on inside of back cover.

Not a Horn Started

Gentlemen:—I used your Chemical Hornstop last year on our calves, and as not a single horn started you may be sure that I am well pleased with the result—so well pleased that I am going to use it again this year. I enclose fifty cents. Kindly mail me a tube at once.—A. R. Holler, R. No. 5, Waterford, Pa.

Like Natural Mulies

Dear Sirs:—A year ago I sent to you for your Chemical Hornstop and used it on nine calves, and I find it a complete success. They have no more sign of horns than if they were natural mulies. I consider this the best way of dealing with the horn proposition. The calves were apparently in no pain while it was doing its work.—John Grubbs, Moberly, Mo., R. No. 5.

Stopped Them at Six Weeks

Dear Sirs:—I got some of your Hornstop and must say that it does more than you claim. When I got it one of my calves was six weeks old, and for curiosity I tried the Hornstop on it. To my surprise it stopped the horns. You only claim that it will do it at ten days or less. I enclose fifty cents for another tube, which please mail at once. I have a calf that is twelve days old now, but am satisfied that it will work all right.—G. W. Herrington, Mayersville, Miss.

One hundred years ago one could buy beef at four cents a pound; today we pay twenty cents. Yet for all that who would want to live one hundred years ago?

Turnips sown into the corn prior to the last cultivation will furnish a large amount of fall feed very cheaply.

Milk is a very large percentage water, and so it is very essential that succulent foods are provided in plenty in the dairy ration. The feed of Dolly Dimple, the Guernsey cow that made such a high milk record in 1909, was composed largely of succulent foods. In thirteen months Dolly Dimple produced 18,458 pounds milk, and 26 per cent. of her feed was roots, 12 per cent. was beet pulp and 18 per cent. ensilage. This makes a total of 56 per cent. succulent foods.

Prior to the middle of the eighteenth century cotton, so far as modern time is concerned, was practically unknown. It was grown only in the flower garden. When eight bags of the staple arrived in Liverpool in 1784 the custom house

(Continued on page 32.)

Fleming's Veterinary Healing Oil

We believe that at least half the loss that results from wire cut and other accidental injury, would be avoided if all would make it a rule to keep Fleming's Veterinary Healing Oil constantly on hand.

Small wounds neglected are more dangerous than large wounds properly treated, and there are more of them.

It is surprising how frequently we hear of bad old sores that apparently nothing can heal, having their beginning with an insignificant wire cut that was neglected.

And they are apt to be neglected unless you have the right thing on hand with which to treat them.

Fleming's Veterinary Healing Oil is, we believe, the best general purpose healing remedy that can be made.

Use it on wounds of every description, collar galls, sores, burns, and everything requiring a healing remedy.

You are sure to have use for it some time—order now so that you will have it.

Mailed prepaid for 50 cents.

See assortment offer on inside of back cover.

Cured Bad Foot

Dear Sir:—I will write you in regard to a very sore foot that my horse had. It was cut on a fence last July, and the man I got her of neglected it. The sore got proud flesh in it and from that it went to blood poison. The veterinarian came down from Chariton and cut off one side of her heel but it did not help. He came again and cut a hole up through it, and still it did not heal. She was then turned out in the pasture and when I got her the first thing I did was to send for your Veterinary Healing Oil. There were three raw spots about the size of a quarter, and two holes in each spot. When I would insert a probe in one hole the matter would come out of the other. I used the Healing Oil five weeks and cured it up. Men who saw the foot before I treated it and afterwards say that it beats anything they ever saw. I am now treating a case of Scratches with it, and it is doing nicely.—Mitchell Horton, Knoxville, Ia.

Toe Sore Two Years

Gentlemen:—Several years ago I had a bottle of your Veterinary Healing Oil. A neighbor woman had a sore toe caused from an ingrowing nail. The doctor pulled a portion of the nail out, but it would not heal. It was that way for two years. I gave her some of the Healing Oil and it soon healed the sore.—John T. Breeden, Hinton, Iowa, R. No. 3.

Doctor Says It Is Fine

Dear Sirs:—I used some of your Veterinary Healing Oil on a bad wire cut, and it left no scar whatever. It certainly works fine.—H. A. Sharpe, M. D., Mt. Vernon, Wis.

Heals Everything

Gentlemen:—I have used your Healing Oil and it has never failed to heal anything that I tried to heal with it. A colored man had a horse that got in a barbed wire fence and he was the worst cut-up horse I ever saw. After he had been doctoring on it for some time and it got no better, I let him have one bottle of

your Healing Oil that I got of you, and I never saw anything heal faster or nicer. I might as well tell you also about the Tonic Heave Remedy. I gave it to an old mare that raised a colt last summer and got very low down, and the hair was rough and stuck out. I believe I could see a difference in three days after I commenced giving her the remedy. She got fat and has been in good order ever since, and has been at work all the time.—T. B. Clore, Criglersville, Va.

Worth Ten Thousand Dollars

Gentlemen:—In regard to the Healing Oil, it did just fine and all that one could expect of it. I have written you before about the sore on my leg and the severe time that I had with it. I had spent seventy dollars for treatment, but instead of healing it I thought I was going to lose my leg. The Healing Oil has been entirely satisfactory. The sore is healed now and I have discontinued its use. It would have been worth ten thousand dollars to me if I had used it instead of the other treatment. My only regret is that I did not do so, and I am not exaggerating a bit in saying that it would have been worth ten thousand dollars, which you would realize if you knew what I have gone through on account of this sore.—L. A. Arland, Leavenworth, Kansas, Sta. A.

Heel Cut Nearly Off

Dear Sirs:—Last winter I sent to you for a Bottle of Healing Oil. I had a driving horse that over-reached and cut her heel nearly off, and I tried everything for four months. Nothing did any good until I got your medicine, then it healed up nicely and she is sound and all right.—Hiram O. Dunning, Brecksville, Ohio, R. No. 2.

(Continued from page 31.)

officers seized it on the ground that so much could not have been raised in America. In 1787 our first cotton mill was set in motion at Beverly, Mass. In 1793 Whitney invented the cotton gin, which rendered cotton raising profitable, and it soon became the leading crop of the South. The Southern United States produce most of the cotton of the world, and will in all probability continue for all time to hold a monopoly of the staple.

Assuming that the total population of the world is 1,600,000,000, and the average annual death rate 20 per 1,000 population, the total number of deaths in a year is about 32,000,000. This is at the rate of 87,671 per day, 3,653 per hour, 61 per minute and 1 per second.

As a fly-chasing mixture for general use on animals, the following has been recommended by several state experiment stations: Fish oil, two quarts; crude carbolic acid, one pint; oil of pennyroyal, one ounce; oil of tar, ten ounces; kerosene, one quart. Mix thoroughly and apply with a brush or sprayer every two or three days.

One man's way of destroying Canada thistles is as follows: In the spring before the thistles have attained a strong growth put a fence around the patch and turn into the enclosure a bunch of thrifty shoats. They will soon turn the entire patch upside down. When there comes a good rain they will smear the soil over in a pretty thorough manner, and with the hot sun baking it there is little inducement for the thistles to grow. The shoats can then be taken out, but watch the patch and if the thistles show an inclination to grow again give them another round of the same treatment.

If you want to sack some grain and have no one to hold the bag for you, an old candy or tobacco pail with the bottom out will answer very well as an assistant. Set the pail in the mouth of the sack, fill it, lift up the sack and pail and so on in that way until the bag is filled.

Our Way of Selling

Fleming's Remedies are not very generally sold in drug stores. The reason is because our leading remedies are specialties for which there is comparatively little demand in any one locality.

For instance, outside a few of the best cattle sections, there may be entire counties in which there are not half a dozen cases of Lump Jaw in a whole year. In the same county there may be anywhere from half a dozen to a hundred or more drug stores, and these druggists could not afford to keep Fleming's Lump Jaw Cure upon their shelves for the sake of supplying so limited a demand. It is just the same with Fistula and Poll Evil, and some of the other diseases we treat.

Therefore, our method of doing business is to deal directly with each customer. Orders are received by mail, and the remedies are sent by mail or express, charges prepaid and safe delivery guaranteed. In this way the scattering business is gathered together, the freshness of the remedies is assured, the customer is protected against imitations, and we are placed in a position to offer special help when required.

This has been our way of selling since we first began business in 1896, and it has proved satisfactory in all respects, to our customers and to ourselves.

Any Six-Dollar Assortment for Five Dollars

Two bottles of Knee-Sprung Cure, or three bottles of any of the two-dollar remedies, or any kind of an assortment amounting to Six Dollars at the prices quoted, will be supplied for Five Dollars.

To secure this reduction the remedies must be ordered direct from us, and the entire six-dollar lot must be ordered at one time.

Fleming's Guarantee

The following guarantee applies according to the claims made for our remedies in our Veterinary Adviser and other printed matter. Its purpose is to insure you your money's worth or your money back. We consider it a guarantee such as any honest business house should want to give to an honest customer.

If any one of Fleming's Remedies doesn't do what we say it will do, we will refund to you its price, you to be the judge and your word to go.

Price List of Fleming's Remedies

Fleming's Remedies are sent by mail, postage prepaid, on receipt of price, and safe delivery is guaranteed. Full directions are in every package. Remittances are always safe when made by Post Office or Express Money Order, or by Registered Letter. See Assortment Offer in opposite column.

Be sure to write your name and address distinctly.

Fleming's Lump Jaw Cure.....\$2.00

More than one bottle is seldom needed for a case, and as a general rule less than a bottle is sufficient.

Fleming's Spavin Cure (Liquid).....\$2.00

One bottle is usually sufficient for several cases. No case needs more than a bottle.

Fleming's Spavin and Ringbone Paste.....\$2.00

Used only upon well-developed cases of Bone Spavin, Ringbone and Sidebone causing marked lameness. One bottle is always enough for a case, and usually enough for several.

Fleming's Fistula and Poll Evil Cure.....\$2.00

Most cases are cured with one bottle or less. An exceptionally obstinate case may need as much as three bottles, but such instances are rare.

Fleming's Knee-Sprung Cure.....\$3.00

Should be used at the start of the trouble. The average quantity needed is about two bottles.

Fleming's Tonic Heave Remedy.....\$1.00

The average quantity for a case of Heaves is about two packages. Some are cured with one, while others require three.

Fleming's Sweeny Cure.....\$1.00

No case needs more than one bottle. Most cases are cured with much less.

Fleming's Colic Cure.....\$1.00

Quantity needed for a case, one to three doses. Bottle contains eight doses.

Fleming's Veterinary Healing Oil..... 50c

Quantity needed depends upon what you are using it for. It is applied lightly and a bottle goes a long way.

Fleming's Veterinary Eye Lotion..... 50c

Each bottle, when diluted with water, makes a quart of Lotion right strength to use.

Fleming's Chemical Hornstop..... 50c

Each tube sufficient for 25 to 50 calves. This preparation will not keep from year to year.

Fleming's Fistula Syringe..... 50c

Capacity of syringe, one-eighth ounce; length of nozzle or pipe, three inches.

Extra Nozzles for Fistula Syringe, each 20c

We do not supply half sizes of any of our remedies.
